WARNING! A Quantum Rehab Provider or a qualified technician must perform the initial setup of this wheelchair and must perform all of the procedures in this manual.

The symbols below are used throughout this owner's manual and on the wheelchair to identify warnings and important information. It is very important for you to read them and understand them completely.

WARNING! Indicates a potentially hazardous condition/situation. Failure to follow designated procedures can cause either personal injury, component damage, or malfunction. On the product, this icon is represented as a black symbol on a yellow triangle with a black border.

MANDATORY! These actions should be performed as specified. Failure to perform mandatory actions can cause personal injury and/or equipment damage. On the product, this icon is represented as a white symbol on a blue dot with a white border.

PROHIBITED! These actions are prohibited. These actions should not be performed at any time or in any circumstances. Performing a prohibited action can cause personal injury and/or equipment damage. On the product, this icon is represented as a black symbol with a red circle and red slash.

INTENDED USE
The intended use of the Pride Mobility Products device is to provide mobility to persons limited to a seated position that have the capability of operating a wheelchair.

Quick Reference Information

I. INTRODUCTION

SAFETY

WELCOME to Pride Mobility Products (Pride). The wheelchair you have purchased combines state-of-the-art components with safety, comfort, and styling in mind. We are confident that these design features will provide you with the conveniences you expect during your daily activities. Once you understand how to safely operate and care for your wheelchair, it should give you years of trouble-free operation and service.

Read and follow all instructions, warnings, and notes in this manual before attempting to operate your wheelchair for the first time. You must also read all instructions, warnings, and notes contained in any supplemental instructional booklets that accompanied your wheelchair before initial operation. Your safety depends upon you, as well as your provider, caretaker, or healthcare professional in using good judgment.

NOTE: Your Litestream Traverse was designed primarily for indoor use only. Do not use your Litestream Traverse on rough surfaces. An attendant must be present when using your Litestream Traverse.

If there is any information in this manual which you do not understand, or if you require additional assistance for setup or operation, please contact your Quantum Rehab Provider. Failure to follow the instructions in this manual and those located on your wheelchair can lead to personal injury and/or damage to the wheelchair, including voiding the warranty.

PURCHASER’S AGREEMENT

By accepting delivery of this product, you promise that you will not change, alter, or modify this product or remove or render inoperable or unsafe any guards, shields, or other safety features of this product; fail, refuse, or neglect to install any retrofit kits from time to time provided by Pride to enhance or preserve the safe use of this product.

SHIPPING AND DELIVERY

Before using your wheelchair, make sure your delivery is complete as some components may be individually packaged. If you do not receive a complete delivery, please contact your Quantum Rehab Provider immediately. Where damage has occurred during transport, either to the packaging or content, please contact the delivery company responsible.

II. SAFETY

PRODUCT SAFETY SYMBOLS
The symbols below are used on the wheelchair to identify warnings, mandatory actions, and prohibited actions. It is very important for you to read and understand them completely.

- **Read and follow the information in the owner’s manual.**

- **Maximum seating weight.**

- **Keep your hands, clothing, and all other objects away from the tires when driving. Do not allow any personal belongings to drag behind the wheelchair when driving. Be aware that loose-fitting clothing or other objects can become caught in the drive wheels and/or they may become entangled in the running gear.**

- **Avoid exposure to rain, snow, ice, salt, or standing water whenever possible. Maintain and store in a clean and dry condition.**

- **Pinch/Crush points created during assembly or use.**

- **Disposal and recycling - Contact your Quantum Rehab Provider for information on proper disposal and recycling of your Pride product and its packaging.**
II. SAFETY

Do not allow the wheelchair to roll freely on a decline.

Do not allow the wheelchair to roll freely on an incline.

Does not meet 7176-19 standards for occupied transport in a motor vehicle. Do not sit on your wheelchair while it is in a moving vehicle.

Indicates wheelchair securement points.

No step. No standing. Keep off!

Wheelchair information label.
GENERAL GUIDELINES

MANDATORY! Do not operate your new wheelchair for the first time without completely reading and understanding this owner's manual.

Your wheelchair is a state-of-the-art life-enhancement device designed to increase mobility. Pride provides an extensive variety of products to best fit the individual needs of the wheelchair user. Please be aware that the final selection and purchasing decision regarding the type of wheelchair to be used is the responsibility of the wheelchair user, who is capable of making such a decision, and his/her healthcare professional (i.e., medical doctor, physical therapist, etc.).

The contents of this manual are based on the expectation that a mobility device expert has properly fitted the wheelchair to the user and has assisted the prescribing healthcare professional and/or the Quantum Rehab Provider in the instruction process for the use of the product.

There are certain situations, including some medical conditions, where the wheelchair user will need to practice operating the wheelchair in the presence of a trained attendant. A trained attendant can be defined as a family member or care professional specially trained in assisting a wheelchair user in various daily living activities.

As you begin using your wheelchair during daily activities, you will probably encounter situations in which you will need some practice. Simply take your time and you will soon be in full and confident control as you maneuver through doorways, on and off of elevators, up and down ramps, and over moderate terrain.

Below are some precautions, tips, and other safety considerations that will help you become accustomed to operating your wheelchair safely.

Modifications
Pride has designed and engineered your wheelchair to provide maximum mobility and utility. A wide range of accessories is available from your Quantum Rehab Provider to further customize your wheelchair to better suit your needs and/or preferences. However, under no circumstances should you modify, add, remove, or disable any feature, part, or function of your wheelchair.

WARNING! Do not modify your wheelchair in any way not authorized by Pride. Do not use accessories if they have not been tested or approved for Pride products.

Pre-Ride Safety Check
Get to know the feel of your wheelchair and its capabilities. Pride recommends that you perform a safety check before each use to make sure your wheelchair operates smoothly and safely. Before riding, you should be trained in the safe use of this wheelchair by your Quantum Rehab Provider.

Perform the following inspections prior to using your wheelchair:

- Check for proper tire inflation. Maintain but do not exceed the psi/bar/kPa air pressure rating indicated on each tire if equipped with pneumatic tires.
- Check the manual wheel locks. See V. “Care and Maintenance.”

NOTE: If you discover a problem, contact your Quantum Rehab Provider for assistance.
II. SAFETY

Weight Limitations
Your wheelchair is rated for a maximum weight capacity. Please refer to the specifications table for this limit. Keep in mind that the maximum weight capacity includes the combined weight of the user and any accessories mounted to the wheelchair.

MANDATORY! Stay within the specified weight capacity of your wheelchair. Exceeding the weight capacity voids your warranty. Pride will not be held responsible for injuries and/or property damage resulting from failure to observe weight limitations.

WARNING! Do not carry passengers on your wheelchair. Carrying passengers on your wheelchair may affect the center of gravity, resulting in a tip or a fall.

WARNING! The rear flap is for pocket items such as cell phones, keys, and papers. Avoid storing sharp objects in the rear flap. There are no other storage areas on your wheelchair.

WARNING! Do not carry heavy baggage weighing more than 4.5 kg (10 lb) on the back of the wheelchair. Carrying or tying baggage in excess of 4.5 kg (10 lb) on the back of the wheelchair may affect the center of gravity, resulting in a tip or a fall.

Tire Inflation
If your wheelchair is equipped with pneumatic tires, you should check or have the air pressure checked regularly. Proper inflation pressures will prolong the life of your tires and help ensure the smooth operation of your wheelchair.

WARNING! It is important that the psi/bar/kPa air pressure rating indicated on the tire be maintained in pneumatic tires at all times. Do not underinflate or overinflate your tires. Low pressure may result in loss of control, and overinflated tires may burst. Failure to maintain the psi/bar/kPa air pressure rating indicated on the pneumatic tires at all times may result in tire and/or wheel failure.

WARNING! Inflate your wheelchair drive tires from a regulated air source with an available pressure gauge. Inflating your tires from an unregulated air source could overinflate them, resulting in a burst tire.

NOTE: If the tire on your wheelchair lists the psi rating only, use the following conversion formulas to find the bar or kPa rating: bar = psi x 0.06895; kPa = psi x 6.89476.

Incline Information
More and more buildings have ramps with specified degrees of inclination, designed for easy and safe access. Some ramps may have turning switchbacks (180-degree turns) that require you to have good cornering skills on your wheelchair.

■ Proceed with extreme caution as you approach the downgrade of a ramp or other incline.
■ Take wide swings with your wheelchair’s front wheels around any tight corners. If you do that, the wheelchair’s rear wheels will follow a wide arc, not cut the corner short, and not bump into or get hung up on any railing corners.
■ When driving down a ramp, proceed slowly to ensure a safely controlled descent.
■ Avoid sudden stops and starts.

When climbing an incline, try to keep your wheelchair moving. If you must stop, start up again slowly and then accelerate cautiously. When driving down an incline, proceed slowly and drive in the forward direction only. If your wheelchair starts to move down the incline faster than you anticipated or desired, bring it to a complete stop using both hands, then proceed slowly to ensure a safely controlled descent.

WARNING! When on any sort of an incline or decline, never allow the wheelchair to roll freely while seated on it or standing next to it.

WARNING! When climbing an incline, do not zigzag or drive at an angle up the face of the incline. Drive your wheelchair straight up the incline. This greatly reduces the possibility of a tip or a fall. Always exercise extreme caution when negotiating an incline.

WARNING! You should not travel up or down a potentially hazardous incline (i.e., areas covered with snow, ice, cut grass, or wet leaves).
II. SAFETY

WARNING! Never travel down an incline backward. Doing so may cause the wheelchair to tip. Always exercise extreme caution when negotiating an incline.

WARNING! If your wheelchair is equipped with a reclining seatback, do not attempt to negotiate inclines with the seat in a reclined position. Do not attempt to negotiate obstacles with the seat in a reclined position unless an attendant is present to help stabilize the chair. Failure to heed may result in the wheelchair tipping over.

WARNING! If your wheelchair is equipped with an optional carry bag mounted to the seatback, do not overload the bag or exceed the maximum load rating of the bag. Doing so could cause instability in your wheelchair when negotiating inclines, causing it to tip.

WARNING! Even though your wheelchair is capable of climbing slopes greater than those illustrated in figure 1, do not, under any circumstances, exceed the incline guidelines or any other specifications presented in this manual. Doing so could cause instability in your wheelchair.

Pride recommends that the maximum slope of an incline you attempt to safely ascend or descend on your wheelchair does not exceed 3.5% (2°). See figure 1.

WARNING! Any attempt to climb or descend a slope steeper than 3.5% (2°) may put your wheelchair in an unstable position and cause it to tip.

Figure 1. Recommended Maximum Safe Slope (Ascending and Descending)

Braking Information
To stop the wheelchair, apply pressure to both handrims until the wheelchair comes to a complete stop.

Manual Wheel Locks
Your wheelchair is equipped with two manual wheel locks: one mounted near (or directly in front of) each drive wheel. The manual wheel locks help prevent your wheelchair from moving when parked. After you bring your wheelchair to a complete stop, engage both manual wheel locks. There are two types of manual wheel locks available on your wheelchair: push-to-lock and pull-to-lock. If you have any questions about the operation of your manual wheel locks, contact your Quantum Rehab Provider.

NOTE: Pride does not recommend that you remain parked on an incline for a long period of time as your wheelchair may slide or the the manual wheel lock may become disengaged after extended use.

WARNING! Do not attempt to use either manual wheel lock lever as a brake.

WARNING! Pride does not recommend that you remain parked on an incline for a long period of time.

WARNING! Use care when operating the wheel locks. Possible pinch point created during operation.

Cornering Information
While your wheelchair is equipped with front caster wheels, excessively high cornering speeds can still create the possibility of tipping. Factors which affect the possibility of tipping include, but are not limited to: cornering speed, steering angle (how sharply you are turning), uneven road surfaces, inclined road surfaces, riding from an area of low traction to an area of high traction (such as passing from a grassy area to a paved area—especially at high speed while turning), and abrupt directional changes. High cornering speeds are not recommended. If you feel that you may tip over in a corner, reduce your speed and steering angle (i.e., lessen the sharpness of the turn) to prevent your wheelchair from tipping.
II. SAFETY

WARNING! When cornering sharply, reduce your speed and maintain a stable center of gravity. This greatly reduces the possibility of a tip or fall.

Public Streets and Roadways

WARNING! You should not operate your wheelchair on public streets and roadways. Be aware that it may be difficult for traffic to see you when you are seated on your wheelchair. Obey all local pedestrian traffic rules. Wait until your path is clear of traffic, and then proceed with extreme caution.

Inclement Weather Precautions

Exposure of your wheelchair to inclement weather conditions should be avoided whenever possible. If suddenly caught up in rain, snow, severe cold or heat while operating your wheelchair, proceed to shelter at the earliest opportunity. Thoroughly dry your wheelchair before storing or operating your wheelchair.

PROHIBITED! Operating in rain, snow, salt, mist/spray conditions, and on icy/slippery surfaces can have an adverse effect on your wheelchair. Maintain and store your wheelchair in a dry and clean condition.

WARNING! Prolonged exposure to hot or cold conditions may affect the temperature of upholstered and non-upholstered items on the wheelchair, possibly resulting in skin irritation. Exercise caution when using the wheelchair in extremely hot or cold conditions or when exposing your wheelchair to direct sunlight for prolonged periods of time.

Stationary Obstacles (Steps, Curbs, etc.)

Proceed with extreme caution when driving near raised surfaces, unprotected ledges and/or drop-offs (curbs, porches, stairs, etc.). Be sure your wheelchair is traveling perpendicular to any curb you may be required to navigate. See figure 2.

WARNING! Even though your wheelchair may be capable of handling greater obstacles, Pride recommends that you do not attempt to negotiate a curb that has a height greater than 5 cm (2 in.). Doing so could cause instability in your wheelchair.

WARNING! Do not attempt to have your wheelchair proceed backward down any step, curb, or other obstacle. This may cause the wheelchair to tip.

Stairs and Escalators

Wheelchairs are not designed to travel up or down stairs or escalators. Always use an elevator.

WARNING! Never use your wheelchair to negotiate steps or escalators.
II. SAFETY

Doors
- Determine if the door opens toward or away from you.
- Drive your wheelchair gently and slowly forward to push the door open. Or drive your wheelchair gently and slowly backward to pull the door open.

Elevators
Modern elevators have a door edge safety mechanism that, when pushed, reopens the elevator door(s).
- If you are in the doorway of an elevator when the door(s) begin to close, push on the rubber door edge or allow the rubber door edge to contact the wheelchair and the door will reopen.
- Use care that pocketbooks, packages, or wheelchair accessories do not become caught in elevator doors.

Lift Systems/Elevation Products
If you will be transporting your wheelchair during travel, you may find it necessary to use a vehicle-mounted lift system or elevation product to aid in transportation. Pride recommends that you closely review the warnings, instructions, specifications, and safety information set forth by the manufacturer of the lift/elevation product before using that product.

**WARNING!** Not all lift systems/elevation products are rated for use with an occupied mobility device. Pride recommends that you do not remain seated in your wheelchair when it is being used in connection with any type of lift system/elevation product unless:

- That product is rated for occupied use by the manufacturer.
- You are able to occupy your mobility device in strict conformity with the warnings, instructions, specifications, and safety guidelines set forth by the manufacturer.

Motor Vehicle Transport
Pride recommends that you do not remain seated in your wheelchair while traveling in a motor vehicle. Your wheelchair was designed to be stored in a secure location, such as the trunk of a car, during motor vehicle transport. In addition, all removable wheelchair parts, including the armrests and front riggings should be removed and/or properly secured during movement.

**WARNING!** Do not sit on your wheelchair while it is in a moving vehicle.

Positioning Belts
Your Quantum Rehab Provider, therapist(s), and other healthcare professionals are responsible for determining your requirement for a positioning belt in order to operate your wheelchair safely. Typically, the positioning belt is not designed for use as a restraining device in a motor vehicle. You should be properly belted into seats approved by the vehicle manufacturer with your wheelchair properly stowed for vehicle transport.

**WARNING!** If you require a positioning belt to safely operate your wheelchair, make sure it is fastened securely in order to reduce the possibility of a fall from the wheelchair.

**WARNING!** The positioning belt is not designed for use as a seat belt in a motor vehicle. Nor is your wheelchair suitable for use as a seat in any vehicle. Anyone traveling in a vehicle should be properly belted into seats approved by the vehicle manufacturer.

Removable Parts

**WARNING!** Do not attempt to lift or move a wheelchair by any of its removable parts, including the armrests, seat, and front riggings. Do not attempt to pick up the wheelchair while the seat is occupied. Pride recommends use of only solid, non-removable frame components to lift or move your wheelchair.
II. SAFETY

Reaching and Bending
Never reach, lean, or bend while driving your wheelchair. If it is absolutely necessary to reach, lean, or bend while seated on your wheelchair, it is important to maintain a stable center of gravity and keep the wheelchair from tipping. Pride recommends that the wheelchair user determine his/her personal limitations and practice bending and reaching in the presence of a qualified healthcare professional.

WARNING! Do not bend, lean, or reach for objects if you have to pick them up from the floor by reaching down between your knees or if you have to reach over the back of the seat. Movements such as these may change your center of gravity and the weight distribution of the wheelchair. This may cause your wheelchair to tip.

WARNING! Keep your hands, clothing, and all other objects away from the tires when driving. Do not allow any personal belongings to drag behind the wheelchair when driving. Be aware that loose-fitting clothing or other objects can become caught in the drive wheels and/or they may become entangled in the running gear.

Transfers
Transferring onto and off of your wheelchair requires a good sense of balance. Always have an attendant or healthcare professional present while learning to properly transfer yourself.

To eliminate the possibility of injury, Pride recommends that you or a trained attendant perform the following tasks before attempting a transfer:

- Turn both caster wheels toward the transfer destination to improve wheelchair stability during transfer.
- Ensure both wheel locks on your wheelchair are engaged. See III. “Your Wheelchair.”
- If necessary, remove or flip up one or both armrests. See IV. “Comfort Adjustments.”
- Move the leg rests aside; this will help to keep your feet from getting caught on the front rigging during the transfer.
- Reduce the distance between your wheelchair and the object you are transferring onto.

WARNING! Before transferring, position yourself as far back as possible in the wheelchair seat to prevent the wheelchair from tipping forward during transfer.

WARNING! Avoid putting all of your weight on the wheelchair armrests and do not use the armrests for weight bearing purposes, such as transfers. Such use may cause the wheelchair to tip, resulting in a fall from the wheelchair and personal injury.

WARNING! Avoid putting all of your weight on the manual wheel locks and do not use the manual wheel locks for weight bearing purposes, such as transfers. Such use may cause equipment damage or personal injury.

WARNING! Avoid putting all of your weight on the front riggings. Such use may cause the wheelchair to tip.

WARNING! Ensure legs, hands, and clothing are clear of the scissor-style wheel lock levers when attempting to transfer.
II. SAFETY

Prescription Drugs/Physical Limitations
Users must exercise care and common sense when operating a wheelchair. This includes awareness of safety issues when taking prescribed or over-the-counter drugs or when the user has specific physical limitations.

WARNING! Consult your physician if you are taking prescribed or over-the-counter medication or if you have certain physical limitations. Some medications and limitations may impair your ability to operate your wheelchair in a safe manner.

Alcohol/Smoking
The wheelchair user must exercise care and common sense when operating his/her wheelchair. This includes awareness of safety issues while under the influence of alcohol or while smoking.

WARNING! Do not operate your wheelchair while you are under the influence of alcohol, as this may impair your ability to operate your wheelchair in a safe manner.

WARNING! Pride strongly recommends that you do not smoke cigarettes while seated in your wheelchair, although the wheelchair has passed the necessary testing requirements for cigarette smoking. You must adhere to the following safety guidelines if you decide to smoke cigarettes while seated in your wheelchair.

- Do not leave lit cigarettes unattended.
- Keep ashtrays a safe distance from the seat cushions.
- Always make sure cigarettes are completely extinguished before disposal.

Flammability Precautions

WARNING! Even though the plastics used on your wheelchair have been tested and have passed the applicable flammability standards, Pride recommends that you do not expose your wheelchair to open flames.

WARNING! Replace worn or damaged upholstery immediately to reduce the risk of fire hazard.

WARNING! Be aware that washing of upholstered items may reduce the resistance to flammability of the fabric.
III. YOUR WHEELCHAIR

THE LITESTREAM TRAVERSE
The Litestream Traverse is a rear-wheel drive wheelchair designed to operate indoors on smooth surfaces.

Figure 5. The Litestream Traverse Wheelchair
III. YOUR WHEELCHAIR

USING THE LITESTREAM TRAVERSE

The Litestream Traverse is a manual wheelchair. Either an attendant pushes it, or you move it by gripping the handrims (see figure 5) and turning them in the desired direction of travel. You steer it by turning one wheel faster than the other. To stop the wheelchair, you apply pressure to both handrims until the wheelchair comes to a complete stop.

WARNING! Ensure that the user’s arms, hands, and feet remain clear of the wheels while operating the wheelchair.

Transporting Your Litestream Traverse

The Litestream Traverse was designed to be stored in a secure location during motor vehicle transport.

To stow the Litestream Traverse:
1. Fold down the seatback. See figure 7.
2. Remove the armrests and leg rests if necessary.

NOTE: You can also remove the drive wheels to make the wheelchair more compact. See “Drive Wheel Adjustments.”

Folding the Litestream Traverse

The seatback of your Litestream Traverse can be folded forward for easier transport.

To fold the seatback of the Litestream Traverse:
1. Remove the armrests. See figure 24.
2. Remove the detent pin located on both rear sides of the unit. See figure 7.

WARNING! Use caution when removing the detent pins. Be aware the metal brackets that secure the detent pins may have sharp edges. The seatback may fall backward if resistance is not applied to it.

WARNING! Removing the detent pins should be accomplished using two people—one applying resistance to the seatback and one removing the detent pins from the unit.

WARNING! Prevent the manual tilt lever cable from becoming entangled with any parts of the wheelchair and/or the user of the wheelchair.

3. Fold the seatback forward.

Figure 6. Right Wheel Lock Engaged (Push-to-lock Shown)

Figure 7. Folding the Seatback
Wheelchair Securement Points
The wheelchair may be equipped with four (4) tie-down points for the purpose of securing the unoccupied wheelchair during motor vehicle transport. Each tie-down point is clearly labeled for this purpose.

To secure a wheelchair equipped with tie-down points:
- Always secure the wheelchair in a forward-facing position in the vehicle.
- Attach the four tie-down straps only to designated, labeled transit securement points indicated by anchor symbols on the wheelchair. See figure 8. Tighten the straps to sufficiently remove all slack.
- Never attach tie-downs to adjustable, moving, or removable parts of the wheelchair such as armrests, front riggings, and wheels.
- Position the anchor points for the rear tie-down straps directly behind the rear securement points on the wheelchair. The front tie-down straps should be anchored to floor points that are spaced wider than the wheelchair to provide increased stability. See figure 8A.

MANDATORY! The wheelchair should be used as indicated in the manufacturer’s instructions. If you have any questions about the proper use of your wheelchair, contact your Quantum Rehab Provider.

Figure 8. Securement Points

Figure 8A. Unoccupied Transit System Securement Points
IV. COMFORT ADJUSTMENTS

COMFORT ADJUSTMENTS
After becoming familiar with your wheelchair’s operation, you may find the need to make some adjustments to increase your comfort, such as drive wheel position, anti-tip wheels position, seatback angle and height, swing-away footrest length, elevating leg rest length and angle, calf pad height and depth, angle adjustable foot plate angle and depth, armrest height and angle, seat angle, caster height, positioning belt, wheel lock position, and seat tension.

WARNING! The center of gravity of your wheelchair was factory set to a position that meets the needs of the demographic majority of users. Your Quantum Rehab Provider has evaluated your wheelchair and made any necessary adjustments to suit your specific requirements. Do not change your seating configuration without first contacting Pride Mobility Products or your Quantum Rehab Provider.

WARNING! Some wheelchair components are heavy. You may need assistance to lift or carry them. Please refer to the specifications table for specific component weights before you disassemble the wheelchair.

WARNING! Remove the occupant from the wheelchair before making any adjustments.

You may need the following to make comfort adjustments:

- 1/8-in. wrench
- 3/8-in. wrench
- 7/16-in. wrench
- 1/2-in. wrench
- 3/4-in. wrench
- 4-mm hex key
- 5-mm hex key
- 3/16-in. hex key
- Standard socket set

NOTE: Any nylon insert lock nut removed during the disassembly or adjustment of the wheelchair must be replaced with a new nut. Nylon insert lock nuts should not be reused as it may cause damage to the nylon insert, resulting in a less secure fit. Replacement nylon insert lock nuts are available at local hardware stores or through your Quantum Rehab Provider.

NOTE: It may be necessary to apply thread lock when reinstalling hardware.

Drive Wheel Adjustment
Your wheelchair is equipped with bolt-on drive wheels. The location of the drive wheel center bolt and nut on the axle bracket determines the drive wheel height. The location of the axle bracket on the wheelchair frame determines the drive wheel position and can affect performance and center of gravity.

WARNING! The more forward that you adjust your drive wheel, the more likely your wheelchair will tip over backward. Always make adjustments in small increments, and check the stability of your wheelchair with a Quantum Rehab Provider or with a spotter to prevent a tip over. We recommend that you use anti-tip tubes until you adapt to the change and are sure that you are not at risk to tip over.

NOTE: If you change the drive wheel position, you may have to change the caster height and adjust the wheel locks. Adjustments to the drive wheels and caster wheels must be done in equal increments, and the drive wheels and caster wheels must maintain the seat pan in a level position for all seat-to-floor heights. Consult your Quantum Rehab Provider.
To change the drive wheel position:
1. To remove the drive wheel, first remove the hubcap (if equipped), then remove the axle nut. See figure 9.
2. Remove the axle bolt and nut from the axle bracket. See figure 10.
3. Place the drive wheel in the desired position.
4. Tighten the axle bolt and nut.
5. Make sure that the axle bolt and nut are securely engaged and that the drive wheel rotates freely.

NOTE: Make sure that both drive wheels are adjusted to the same position.

Seatback Tilt Angle Adjustment
Your Litestream Traverse is equipped with a manual tilt. The seatback tilt angle can be adjusted to 90°-135° using the tilt lever.

WARNING! Ensure that the user's arms, hands, and feet remain clear of the wheels if the seatback is tilted while operating the wheelchair.

To adjust the seatback tilt angle of the Litestream Traverse using the tilt lever:
1. Squeeze the tilt lever. See figure 11.
2. Position the seatback at the desired tilt angle.
3. Release your grip from the tilt lever.

NOTE: There is a detent pin located on the tilt lever to prevent unintended operation. Remove the detent pin to operate the tilt lever.

WARNING! Ensure the detent pin is reinstalled in the tilt lever after adjusting the seatback to the desired tilt angle.

Figure 10. Drive Wheel Position Adjustment
Figure 11. Tilt Lever
IV. COMFORT ADJUSTMENTS

Seatback Recline Angle Adjustment
The seatback recline angle can be adjusted to 80°-120° in 5° increments by adjusting the angle-adjustable back canes.

To adjust the seatback recline angle by adjusting the angle-adjustable back canes:
1. Remove the drive wheel. See figure 9.
2. Remove the angle adjustment screw and the P clip that secures the manual tilt lever cable. See figure 12.
3. Position the back canes at the desired angle.
4. Reinstall the angle adjustment screw and the P clip that secures the manual tilt lever cable. See figure 12.
5. Repeat on the other side of the wheelchair.

Anti-tip Wheel Adjustment
Anti-tip wheels are an integral and important safety feature of your wheelchair. They are factory set to between 2-5 cm (0.75-2 in.), but may require adjustment to accommodate depth adjustment and center of gravity.

PROHIBITED! Do not remove the anti-tip wheels or modify the wheelchair in any way that is not authorized by Pride.

WARNING! Do not operate without anti-tip tubes installed.

WARNING! The anti-tip wheels should only be adjusted by a Quantum Rehab Provider or a qualified technician.

To adjust the anti-tip wheels:
1. Remove the quick release pin from the anti-tip wheel. See figure 13.
2. Adjust the anti-tip wheel to the desired position while aligning the anti-tip wheel with the adjustment holes.
3. Once properly positioned, reinsert the quick release pin and ensure that it is fully engaged.
4. Repeat for the other side.

NOTE: Make sure the quick release pin’s ring is facing inward to avoid interference with the drive wheel.
IV. COMFORT ADJUSTMENTS

Swing-Away Footrest (SFR) Removal
The swing-away footrests (SFR) can be moved or removed to aid in transfers or transporting your wheelchair.

To move the SFR to the side:
1. Push the release lever back. See figure 14.
2. Move the SFR aside.
3. Repeat for the other side if necessary.

To remove the SFR:
1. Move the SFR to the side.
2. Pull the SFR up. See figure 15.
3. Repeat for the other side if necessary.

Swing-Away Footrest (SFR) Foot Plate Length
You can change the SFR foot plate length in 2.54-cm (1-in.) increments. This length is measured from the SFR foot plate to the top of the SFR. See figure 16.

The ranges of lengths for the leg rest lowers are:
- Short: 27.94-36.83 cm (11-14.5 in.)
- Medium: 33.02-41.91 cm (13-16.5 in.)
- Long: 41.275-50.8 cm (16.25-20 in.)

To change the SFR foot plate length:
1. Remove the screws from the SFR.
2. Adjust the foot plate to the desired length.
3. Reinstall the screws into the SFR.
4. Repeat for the other side.

Elevating Leg Rest (ELR) Foot Plate Length
You can change the ELR foot plate length between 33.66-55.88 cm (13.25-22 in.). This length is measured from the ELR foot plate to the top of the ELR. See figure 17.

To change the ELR foot plate length:
1. Loosen the screws on the back of the ELR.
2. Adjust the foot plate to the desired length.
3. Tighten the screws on the back of the ELR.
4. Repeat the procedure for the other side.

NOTE: If your wheelchair is equipped with the hemi ELRs, the 5.08-cm (2-in.) extension must be used.
**IV. COMFORT ADJUSTMENTS**

Elevating Leg Rest (ELR) Angle
You can change the ELR angle. See figure 18.

To change the ELR angle:
1. To raise, pull the ELR up to the desired position.
2. To lower, pull the ELR release lever and lower the ELR to the desired position.

WARNING! Use care when operating. Possible pinch point created during operation.

Elevating Leg Rest (ELR) Calf Pad
You can change the height and depth of the ELR calf pad. See figures 19 and 20.

To change the ELR calf pad height:
1. Remove the screw to unfasten the calf pad from the ELR.
2. Move the calf pad up or down to the desired position.
3. Replace the screw to refasten the calf pad to the ELR.
4. Repeat for the other side.

To change the ELR calf pad depth:
1. Remove the screw to unfasten the calf pad from the calf pad bracket.
2. Move the calf pad in or out to the desired position.
3. Replace the screw to refasten the calf pad to the calf pad bracket.
4. Repeat for the other side.
Angle Adjustable Foot Plates
The angle adjustable foot plates have two adjustments: angle and depth. The depth can be adjusted to four (4) positions in 2.54-cm (1-in.) increments. If the position of the foot plate adapter is reversed, an additional 2 cm (0.75 in.) of depth can be achieved at the most forward and most rearward positions. See figure 21. The foot plates can also be flipped up for ease of transfer. See figure 21.

To adjust the foot plate angle:
1. Loosen the screws in the foot plate.
2. Tilt the foot plate forward or back to the desired angle. See figure 22.
3. Tighten the screws to secure the foot plate in place.

To adjust the foot plate depth:
1. Remove the screws and nuts from the foot plate assembly. See figure 23.
2. Remove the foot plate and foot plate adapter from the leg rest extension.
3. Reposition the foot plate on the foot plate adapter to achieve the desired depth. See figure 23.
4. Reinstall the screws to the foot plate and secure with the nuts. Do not fully tighten.
5. Slide the foot plate assembly onto the leg rest extension.
6. Adjust the foot plate to the desired angle and fully tighten the screws.

Figure 21. Foot Plate Flip Up Adjustment
Figure 22. Foot Plate Angle Adjustment
Figure 23. Foot Plate Depth Adjustment
IV. COMFORT ADJUSTMENTS

Drop-in Armrest Removal
The drop-in armrests can be removed to aid in transfers or transporting your wheelchair.

To remove the armrest:
1. Squeeze the armrest latch. See figure 24.
2. Pull the armrest up.
3. Repeat for the other side if necessary.

WARNING! Use care when operating. Possible pinch point created during operation.

WARNING! Do not lift by armrests or leg rests.

Drop-in Armrest Height Adjustment
You can adjust the drop-in armrest height to five positions in 1-in. (2.54-cm) increments.

To adjust the drop-in armrest:
1. Pull back the release lever located on the armrest. See figure 25.
2. Move the armrest up or down.
3. Release the release lever.
4. Make sure the armrest latches into place.
5. Repeat for the other side if necessary.
Positioning Belt (Optional)
Your wheelchair may be equipped with a positioning belt that can be adjusted for operator comfort. See figure 26. The positioning belt is designed to support the operator so that he/she does not slide down or forward in the seat. The positioning belt is not designed for use as a restraining device in a motor vehicle.

WARNING! The positioning belt should be secured at all times. Never allow the positioning belt to hang or drag on the floor as it may become entangled.

To adjust the positioning belt for operator comfort:
1. Once seated, insert the metal tab on one side of the belt into the plastic housing on the opposite side until you hear a click. See figure 26.
2. Pull the excess strap attached to the metal tab until it is secure, but not so tight as to cause discomfort.

To release the positioning belt:
1. Push the button mechanism on the plastic housing.

MANDATORY! Make sure the positioning belt is properly secured to the wheelchair and is adjusted for operator comfort before each use.

MANDATORY! Inspect the positioning belt for loose parts or damage, including tears, worn spots, bent hardware, damaged latch mechanisms, dirt or debris, before each use of the wheelchair. If you discover a problem, contact your Quantum Rehab Provider for maintenance and repair.

V. CARE AND MAINTENANCE

CARE AND MAINTENANCE
Your Litestream Traverse requires routine maintenance checks. You can perform some of these checks, but others require assistance from your Quantum Rehab Provider. Preventive maintenance is very important. If you follow the maintenance checks in this section as scheduled, you can help ensure that your wheelchair gives you years of trouble-free operation. If you have any doubt as to your wheelchair’s care or operation, contact your Quantum Rehab Provider.

WARNING! Do not service the wheelchair when the seat is occupied.
Your wheelchair is susceptible to damage from the elements. Avoid damp areas of any kind.

WARNING! Direct or prolonged exposure to water or dampness could cause the wheelchair to malfunction mechanically. Water can cause the chair’s frame to rust. Wheelchairs should be examined periodically for signs of corrosion caused by water exposure, bodily fluids exposure, or incontinence. Damaged components should be replaced or treated immediately.

Should your wheelchair come in contact with water:
1. Dry your wheelchair as thoroughly as possible with a towel.
2. Allow your wheelchair to sit in a warm, dry place for 12 hours to allow unseen water to evaporate.
3. If any inconsistencies are found, take your wheelchair to your Quantum Rehab Provider. Wheelchairs that are frequently exposed to sources of water, such as incontinence, should be inspected often for corrosion.

Temperature
Some of the parts of your wheelchair are susceptible to extreme changes in temperature. Always keep your wheelchair between the temperatures of -8°C (18°F) and 50°C (122°F).

General Guidelines
- Avoid prolonged exposure of your wheelchair to extreme conditions, such as heat, cold, or moisture.
- Make sure the pneumatic tires are inflated to the psi/bar/kPa air pressure rating indicated on the tire if equipped with pneumatic tires.

WARNING! Make sure your tires are inflated to the psi/bar/kPa air pressure rating indicated on the tire. Do not underinflate or overinflate your tires. Low pressure may result in loss of control, and overinflated tires may burst. Overinflating tires can cause them to explode.

WARNING! Do not use a high pressure hose to inflate your tires.

- Use a rubber conditioner on the tire sidewalls to help preserve them.

WARNING! Never use a rubber conditioner on the tread area of the tires; doing so may make the tires slippery and cause your wheelchair to skid.

- All wheel bearings are prelubricated and sealed. They require no subsequent lubrication.

Daily Checks
- Check the seat for any visible damage.
- Check for loose or missing screws, nuts, and bolts. Replace or tighten them as necessary.
- Check the tires. Look for uneven wear, holes, or tire/rim separation. If they look excessively worn, then have them replaced.
- Visually inspect pneumatic tires for punctures.
- Confirm correct air pressure as marked on the side of the tire.
- Check for flat spots on solid tires. Flat spots could adversely affect stability.
- Check the handrims. Make sure that they are fastened securely to the wheels.
- Check the wheel locks. Make sure they work properly. If they don’t, instructions on how to adjust them are provided in this manual.
WARNING! The wheel locks are designed to keep your chair stationary while you are parked. They are not designed to stop the wheelchair during driving. Do not use either of the wheel locks to stop the wheelchair while driving it. This can cause your wheelchair to become unstable and tip.

Weekly Checks
- Check for proper tire inflation. Pneumatic tires should be inflated to the psi/bar/kPa air pressure rating indicated on the tire. If a tire does not hold air, see your Quantum Rehab Provider for replacement of the tube.
- Check the anti-tip wheels for wear or damage. See your Quantum Rehab Provider for replacement or repair.

Monthly Checks
- Check for drive tire wear. See your Quantum Rehab Provider for repair.
- Check the caster wheels for wear. Replace them as necessary.
- Check the caster forks for damage or fluttering which indicates that they may need to be adjusted or have the bearings replaced. See your Quantum Rehab Provider for repair.
- Check tilt cable for damage.
- Verify smooth tilt function.
- Verify fasteners are tight.
- Check all positioning parts for damage.
- Keep your wheelchair clean and free of foreign material, such as mud, dirt, hair, food, drink, etc.

Yearly Checks
Take your wheelchair to your Quantum Rehab Provider for yearly maintenance, especially if you use your wheelchair on a daily basis. This helps ensure that your wheelchair is functioning properly and helps prevent future complications.

Storage
Your wheelchair should be stored in a dry place, free from temperature extremes.

WARNING! If you fail to store the unit properly, the frame can rust.

You may wish to place several boards under the frame of your wheelchair to raise it off of the ground during periods of prolonged storage. This takes the weight off the tires and reduces the possibility of flat spots developing on the areas of the tires contacting the ground.

Disposal of Your Wheelchair
Your wheelchair must be disposed of according to applicable local and national statutory regulations. Contact your local waste disposal agency or Quantum Rehab Provider for information on proper disposal of wheelchair packaging, metal frame components, plastic components, neoprene, silicone, and polyurethane materials.

Cleaning and Disinfection
- Use a damp cloth and mild, non-abrasive cleanser to clean the plastic and metal parts of your wheelchair. Avoid using products that may scratch the surface of your wheelchair.
- If necessary, clean your product with an approved disinfectant. Make sure the disinfectant is safe for use on your product before application.

WARNING! Follow all safety instructions for the proper use of the disinfectant and/or cleaning agent before applying it to your product. Failure to comply may result in skin irritation or premature deterioration of upholstery and/or wheelchair finishes.

WARNING! Never hose off your wheelchair or place it in direct contact with water. Your wheelchair has a painted finish that allows it to be easily wiped clean with a damp cloth.
WARNING! Never use any chemicals to clean a vinyl seat, as they may cause the seat to become slippery or dry out and crack. Use soapy water and dry the seat thoroughly.

Wheel Replacement
If you have pneumatic tires and you have a flat tire, you can replace the tube. If your wheelchair is equipped with a solid tire insert, then you must replace the entire wheel assembly. Replacement tires, tubes, and wheel assemblies are readily available through your Quantum Rehab Provider.

WARNING! The wheels on your wheelchair should only be serviced or replaced by a Quantum Rehab Provider or a qualified technician.

WARNING! When changing a tire, remove the entire drive wheel. If any further disassembly is required, deflate the tire completely or it may explode.

To replace a pneumatic tire tube, flat-free insert, or solid polyurethane tire:
1. Remove the drive wheel from the frame. See figure 9.
2. If equipped with pneumatic tires, make sure that the tube is deflated completely.
3. Use several tire levers to pry the tire from the rim. Tire levers are available from a bicycle shop.

NOTE: If your wheelchair is equipped with solid polyurethane tires, then no further disassembly is required. Go to step 7.

4. Remove the old tube or flat-free insert.
5. If equipped with pneumatic tires, inflate the new tube with enough air so that it just starts to take shape.
6. If equipped with pneumatic tires or flat-free inserts, install the tube or flat-free insert into the tire.
7. Use the tire levers to secure the tire back onto the rim.
8. If equipped with pneumatic tires, inflate the tire to the psi/bar/kPa air pressure recommended on the sidewall. Always use a regulated air source.
9. Reinstall the drive wheel to the frame. See IV. “Comfort Adjustments.”

Manual Wheel Locks
After several months of use, you may find it necessary to adjust the wheel locks so that they lock securely when engaged. You also may need to adjust them after changing the drive wheel position.

WARNING! If your wheelchair is equipped with pneumatic tires, make sure they are inflated to the pressure recommended on the sidewall of the tire.

To adjust each manual wheel lock:
1. Disengage the wheel lock. See figure 6. The wheel lock blade should be 0.64 cm (0.25 in.) away from the tire for both pneumatic and solid tires.
2. Loosen the hardware that fastens the wheel lock clamp to the frame.
3. Reposition the wheel lock so that the blade is 0.64 cm (0.25 in.) away from the tire and perpendicular to the plane of the tire. See figure 29.
4. Tighten the hardware that fastens the wheel lock clamp to the frame.
5. Engage the wheel lock and note the position of the blade.
6. Reposition the wheel lock if necessary.
7. Repeat the procedure for the other side.

Figure 29. Wheel Lock Adjustment
V. CARE AND MAINTENANCE

WARNING! A Quantum Rehab Provider should adjust the wheel lock with the occupant in the wheelchair on the maximum incline to ensure that the wheel lock catches properly.

When to See Your Quantum Rehab Provider for Service
The following symptoms could indicate a serious problem with your wheelchair. If necessary, contact your Quantum Rehab Provider. When calling, have the model number, serial number, and nature of the problem.

- Uneven wear on any of the tires
- Bent or broken wheel assemblies
- Loose or missing hardware that attaches the transit securement brackets or positioning belt to the wheelchair.

SAFETY GUIDELINES

WARNING! A Quantum Rehab Provider or a qualified technician must perform the initial setup of this wheelchair and must perform all of the procedures in this manual.

The symbols below are used throughout this owner's manual and on the wheelchair to identify warnings and important information. It is very important for you to read them and understand them completely.

WARNING! Indicates a potentially hazardous condition/situation. Failure to follow designated procedures can cause either personal injury, component damage, or malfunction. On the product, this icon is represented as a black symbol on a yellow triangle with a black border.

MANDATORY! These actions should be performed as specified. Failure to perform mandatory actions can cause personal injury and/or equipment damage. On the product, this icon is represented as a white symbol on a blue dot with a white border.

PROHIBITED! These actions are prohibited. These actions should not be performed at any time or in any circumstances. Performing a prohibited action can cause personal injury and/or equipment damage. On the product, this icon is represented as a black symbol with a red circle and red slash.

INTENDED USE
The intended use of the Pride Mobility Products device is to provide mobility to persons limited to a seated position that have the capability of operating a wheelchair.
