SAFETY GUIDELINES

WARNING! An authorized Pride Provider or a qualified technician must perform the initial setup of this product and must perform all of the instructions in this manual.

The symbols below are used throughout this owner's manual and on the power chair to identify warnings and important information. It is very important for you to read them and understand them completely.

WARNING! Indicates a potentially hazardous condition/situation. Failure to follow designated procedures can cause either personal injury, component damage, or malfunction. On the product, this icon is represented as a black symbol on a yellow triangle with a black border.

MANDATORY! These actions should be performed as specified. Failure to perform mandatory actions can cause personal injury and/or equipment damage. On the product, this icon is represented as a white symbol on a blue dot with a white border.

PROHIBITED! These actions are prohibited. These actions should not be performed at any time or in any circumstances. Performing a prohibited action can cause injury to personnel and/or damage to equipment. On the product, this icon is represented as a black symbol with a red circle and a red slash.

NOTE: These instructions are compiled from the latest specifications and product information available at the time of publication. We reserve the right to make changes as they become necessary. Any changes to our products may cause slight variations between the illustrations and explanations in this manual and the product you have purchased. The latest/current version of this manual is available on our website.

PRODUCT SAFETY SYMBOLS
The symbols below are used on the controller to identify warnings, mandatory actions, and prohibited actions. It is very important for you to read and understand them completely.

- Read and follow the information in the owner’s manual.
- Avoid exposure to rain, snow, ice, salt, or standing water whenever possible. Maintain and store in a clean and dry condition.
- Disposal and recycling - Contact your authorized Pride Provider for information on proper disposal and recycling of your Pride product and its packaging.
- EMI-RFI - This product has been tested and passed at an immunity level of 20 V/m.
- Use correct tie-down points for controller harness to prevent the harness from getting caught in the drive tires, pinched in the seat frame, or damaged when passing through doorways.
INTRODUCTION
WELCOME to Pride Mobility Products Corporation (Pride). The product you have purchased combines state-of-the-art components with safety, comfort, and styling in mind. We are confident that the design features will provide you with the conveniences you expect during your daily activities. Understanding how to safely operate and care for this product should bring you years of trouble-free operations and service.

Read and follow all instructions, warnings, and notes in this manual before attempting to operate your product for the first time. You must also read all instructions, warnings, and notes contained in any supplemental instructional booklets for the controller, front riggings, and/or seating system that accompanied your power chair before initial operation. Your safety depends upon you, as well as your provider, caretaker, or healthcare professional in using good judgement.

This manual is to be used in addition to the power base owner’s manual that came with your power chair. If there is any information in this manual which you do not understand, or if you require additional assistance for setup or operation, please contact your authorized Pride Provider. Failure to follow the instructions, warnings, and notes in this manual and those located on your Pride product can result in personal injury and/or product damage and will void Pride’s product warranty.

PURCHASER’S AGREEMENT
By accepting delivery of this product, you promise that you will not change, alter, or modify this product or remove or render inoperable or unsafe any guards, shields, or other safety features of this product; fail, refuse, or neglect to install any retrofit kits from time to time provided by Pride to enhance or preserve the safe use of this product.

INFORMATION EXCHANGE
We want to hear your questions, comments, and suggestions about this manual. We would also like to hear about the safety and reliability of your new Pride product, and about the service you received from your authorized Pride Provider. Please notify us of any change of address, so we can keep you apprised of important information about safety, new products, and new options that can increase your ability to use and enjoy your Pride product.
NOTE: If you ever lose or misplace your product registration card or your copy of this manual, contact us and we will be glad to send you a new one immediately.

My authorized Pride Provider Is:

Name: 

Address: 

Phone Number: 

Purchase Date: 
GC CONTROLLER
The GC Controller is a fully programmable, modular-electronic controller system that allows you to operate your power chair. It is designed to allow the user to have complete control over chair movement and speed.

The controller has been pre-programmed to meet a typical user’s needs. The program is set using either a personal computer with software provided by the controller manufacturer or with a hand-held programmer, also provided by the controller manufacturer.

WARNING! The controller program can affect speed, acceleration, deceleration, dynamic stability, and braking. If it is programmed incorrectly or outside of the safe limits as determined by your healthcare professional, it can create a dangerous situation. Only the power chair manufacturer, an authorized representative of the manufacturer, or a trained service technician should program the controller.

PRECAUTIONARY GUIDELINES
Before operating the GC controller, please read the following. These guidelines are provided for your benefit and will aid you in the safe operation of the control system.

■ Turn off the power to the controller when transferring to or from your power chair.
■ Follow all of the procedures and heed the warnings as explained in your power chair owner’s manual.
Electromagnetic and Radio Frequency Interference (EMI/RFI)

**WARNING!** Laboratory tests have shown that electromagnetic and radio frequency waves can have an adverse affect on the performance of electrically-powered mobility vehicles.

Electromagnetic and Radio Frequency Interference can come from sources such as cellular phones, mobile two-way radios (such as walkie-talkies), radio stations, TV stations, amateur radio (HAM) transmitters, wireless computer links, microwave signals, paging transmitters, and medium-range mobile transceivers used by emergency vehicles. In some cases, these waves can cause unintended movement or damage to the control system. Every electrically-powered mobility vehicle has an immunity (or resistance) to EMI. The higher the immunity level, the greater the protection against EMI. This product has been tested and has passed at an immunity level of 20 V/m.

**WARNING!** Be aware that cell phones, two-way radios, laptops, and other types of radio transmitters may cause unintended movement of your electrically-powered mobility vehicle due to EMI. Exercise caution when using any of these items while operating your mobility vehicle and avoid coming into close proximity of radio and TV stations.

**WARNING!** The addition of accessories or components to the electrically-powered mobility vehicle can increase the susceptibility of the vehicle to EMI. Do not modify your power chair in any way not authorized by Pride.

**WARNING!** The electrically-powered mobility vehicle itself can disturb the performance of other electrical devices located nearby, such as alarm systems.

*NOTE: For further information on EMI/RFI, go to the Resource Center on www.pridemobility.com. If unintended motion or brake release occurs, turn your power chair off as soon as it is safe to do so. Call Pride or your authorized Pride Provider to report the incident.*
GC Controller Features
Figure 1 provides information on the GC components and connections. Use this diagram to familiarize yourself with the function and location of each component before using the GC Controller.

The following functions are available with the GC Controller:

- **Joystick Control**
  The joystick is used to control the direction and speed of the power chair.

- **Speed Adjustment**
  The user can increase or decrease the maximum speed of the power chair.

- **Sleep Mode**
  This feature is designed to preserve battery charge and can be disabled through programming.

- **Thermal Rollback**
  A safety feature designed to prevent the power chair from overheating and causing damage to the motors or controller.
Figure 1. GC Components

- **Joystick**: A multi-functional tool used to control speed & direction.
- **Speed Dial**: Turn to increase or decrease maximum speed.
- **Battery Condition Meter**: Series of five colored LEDs which display the battery condition and fault codes.
- **On/Off Key**: Press to power on or off the power chair and controller.
- **Horn Key**: Activates a warning horn.
OPERATING THE GC CONTROLLER
The GC controller is used to operate your power chair and all of its components.

The GC Controller system consists of (see figure 2):
1. joystick
2. control panel
3. joystick module
4. power module

Figure 2. GC Controller

Joystick Control
The joystick controls the driving speed and direction of the power chair. When the joystick is at rest, it is in the neutral (center) position, and the chair is stationary. In order to drive the chair, the joystick must be taken out of neutral. Moving the joystick in any direction will switch the chair from neutral to drive, and the chair will move in the direction indicated by joystick position. The farther away from the neutral position the joystick is, the faster the chair will move in that direction. To stop chair movement, simply release the joystick or move it back to the neutral position. The chair’s electromagnetic brakes will engage after the chair has come to a controlled stop.
Control Panel
The control panel is located directly in front of the joystick. It contains keys and a dial that you will use to control your power chair. See figure 3.

On/Off Key
The on/off key turns the system on and off.

**WARNING!** Unless faced with an emergency situation, do not use the on/off key to stop the chair. This will cause the power chair to stop abruptly.

**WARNING!** Always turn the power off when you are stationary to prevent unexpected movement.

Horn Key
The horn key activates a warning horn.
Speed Dial
The GC Controller provides a speed dial to control the speed of the power chair. See figure 3.

To change the speed:
1. Push the on/off key to power on the chair and the controller.
2. To increase your speed, turn the speed dial clockwise.
3. To decrease your speed, turn the speed dial counterclockwise.

*NOTE: We recommend that the first few times you operate your power chair, you set the speed to the slowest setting until you become familiar with your new power chair.*

Battery Condition Meter
The battery condition meter consists of five LEDs arranged in an arc over the on/off and horn keys. See figure 1. When functioning as the battery condition meter, this indicates the status of the electrical system using LED codes. For example, as the battery voltage drops, the number of LEDs reduces from right to left. When the battery capacity drops to 10% or below, the left red LED will flash.

Battery condition meter codes are as follows:
- **Left Red LED Flashing Slowly or Steady:** Battery charge is low; charge the batteries as soon as possible.
- **LEDs Scroll from Left to Right:** The controller is in inhibit or charging mode.
- **Side-to-Side Double LED Ripple Followed by All LEDs Flashing Quickly:** The joystick was not in the center position when the power was switched on, or the controller system detected a fault; refer to the Fault Code Table.
Controller Communication Connector
The controller communications connector provides the GC with a connec-
tion to the power module.

MANDATORY! Prevent controller harness damage! Avoid
routing the controller harness on the outside of the armrest
pad. Route the harness under the armrest or toward the
inside of the armrest pad. Use correct tie-down points for
the controller harness to prevent the harness from getting
captured in the drive tires, pinched in the seat frame, or
damaged when passing through doorways.

LOCK MODE
The controller is equipped with a feature that enables you to “lockout” unau-
thorized users.

To lock the controller:
1. While the power is on, press and hold the on/off key until it beeps
   (approximately 1 second).
2. Release the on/off key.
3. Move the joystick to the full forward position until it beeps.
4. Move the joystick to the full rearward position until it beeps.
5. Release the joystick. There will be one long beep. The controller system
   is now locked.

NOTE: The battery condition meter will be stepping up from left to right.
The sequence will step up for two full cycles and then turn off.

To unlock the controller:
1. Press the on/off key to turn on the controller. The battery condition
   meter will ripple the “locked” sequence.
2. Move the joystick to the full forward position until it beeps.
3. Move the joystick to the full rearward position until it beeps.
4. Release the joystick. There will be one long beep. The controller system
   is now unlocked.
SLEEP MODE
Your GC Controller has a sleep mode feature. Sleep mode is a built-in circuit that automatically shuts off the main power if the joystick is not moved in any direction for a period of time predetermined by the controller program. When the programmed period of time is reached, the joystick will beep and then power off. To restore power, push the on/off key.

THERMAL ROLLBACK
The GC Controller is equipped with a thermal rollback circuit which monitors the temperature of the chair’s motors and controller. If either exceeds the safe operating temperature, the controller reduces the output to 50% of full operation level. This reduces the chair’s speed and allows a cool down period. Once the temperature returns to a safe level, the chair will resume normal operation.
FAULT CODES
The battery condition meter will flash fault codes when the controller system detects an abnormal condition in the electrical system. All of the battery condition meter LEDs will flash a number of times quickly, then pause, then flash again. The battery condition meter will continue to flash the fault codes until the problem is fixed. The table below identifies the individual fault codes. If any of these fault codes persist, contact your authorized Pride Provider.

<table>
<thead>
<tr>
<th>Fault Codes</th>
<th>Probable Causes</th>

CARE AND MAINTENANCE
Refer to your power chair owner’s manual for proper cleaning and disposal instructions.

WARRANTY
For two (2) years from the date of purchase, Pride will repair or replace at our option to the original purchaser, free of charge, the controller or any of its components found upon examination by an authorized representative of Pride to be defective in material and/or workmanship.

Warranty Exclusion
This warranty does not extend to those power chairs that offer a one-year limited warranty on electronics, including the controller. Refer to your power base owner’s manual for more information.
