ATTENTION: Please read the content of your owner's manual before operating your power chair.
SAFETY GUIDELINES

Please read and follow all instructions in this owner’s manual before attempting to operate your power chair for the first time. If there is anything in this manual you do not understand, or if you require additional assistance for set-up, contact your authorized Pride provider.

Using your Pride product safely depends upon your diligence in following the warnings, cautions, and instructions in this owner’s manual. Using your Pride product safely also depends upon your own good judgement and/or common sense, as well as that of your provider, caregiver, and/or healthcare professional. Pride is not responsible for injuries and/or damage resulting from any person’s failure to follow the warnings, cautions, and instructions in this owner’s manual. Pride is not responsible for injuries and/or damage resulting from any person’s failure to exercise good judgement and/or common sense.

The symbols below are used throughout this owner’s manual to identify warnings and cautions. It is very important for you to read and understand them completely.

| WARNING! Failure to heed the warnings in this owner's manual may result in personal injury. |
| CAUTION! Failure to heed the cautions in this owner's manual may result in damage to your power chair. |

I. INTRODUCTION

INTRODUCTION
Welcome to Pride Mobility Products Corporation (Pride). Congratulations on the purchase of your new Pride Power Chair. The Pride Power Chair design combines the most advanced state-of-the-art components with modern, attractive styling. We are certain that the design features and trouble-free operation of your new power chair will add convenience to your daily living.

At Pride, your safety is important to us. Please read and follow all of the instructions in this manual before you attempt to operate your power chair for the first time. These instructions were produced for your benefit. Your understanding of these instructions is essential for the safe operation of your new power chair.

Pride is not liable for damage to property or personal injury arising out of unsafe use of a power chair. Pride is also not liable for any property damage or personal injury arising out of the failure of any person and/or user to following the instructions and recommendations set forth in this manual or any other instructions or recommendations contained in other power chair related literature issued by Pride or contained on the power chair itself.

This owner’s manual is compiled from the latest specifications and product information available at the time of publication. We reserve the right to make changes as they become necessary. Any changes to our products may cause slight variations between the illustrations and explanations in this manual and the product you have purchased.

If you experience any problems with your power chair that you are unable to solve, or if you do not feel capable of safely following any of the instructions and/or recommendations as contained in this manual, please contact your authorized Pride provider for assistance.

Once you understand how to operate and take care of your power chair, we are certain that it will give you years of trouble-free service and enjoyment.

Information Exchange
We want to hear your questions, comments, and suggestions about this manual. We would also like to hear about the safety and reliability of your new power chair, and about the service you received from your authorized Pride provider.

Please notify us of any change of address, so we can keep you apprised of important information about safety, new products, and new options that can increase your ability to use and enjoy your power chair. Please feel free to contact us at the address below:

Pride Mobility Products Corporation

1. Introduction

Pride Owners Club
As an owner of a Pride product, you are invited to register your product’s warranty and enroll in the Pride Owners Club. You may do so by filling out and returning your enclosed registration card or by visiting Pride’s web site at www.pridemobility.com. As a registered member, each time you visit our site, you will have access to the most interactive and honest educational venue available today for people with mobility needs, their families, and friends.

From our home page, select “Owners Club” to enter a page dedicated to current and potential Pride product owners. You will gain access to interviews, stories, recreation ideas, daily living tips, product and funding information, and interactive message boards. These message boards invited you to communicate with other Pride customers as well as Pride representatives who are available to assist you with any questions or concerns you may have.

My Authorized Pride Provider Is:

Name: ____________________________________________

Address: ____________________________________________

Phone Number: ____________________________________________

Purchase Date: ____________________________________________

NOTE: If you ever lose or misplace your product registration card or your copy of this manual, contact us and we will be glad to send you a new one immediately.
II. SAFETY

SAFETY

WARNING! Do not operate your new power chair for the first time without completely reading and understanding this owner’s manual.

Your power chair is a state-of-the-art life-enhancement device designed to increase mobility. Pride provides an extensive variety of products to best fit the individual needs of the power chair user. Please be aware that the final selection and purchasing decision regarding the type of power chair to be used is the responsibility of the power chair user, who is capable of making such a decision, and his/her healthcare professional (i.e., medical doctor, physical therapist, etc.).

The contents of this manual are based on the expectation that a mobility device expert has properly fitted the power chair to the user and has assisted the prescribing healthcare professional and/or the authorized Pride provider in the instruction process for the use of the product.

There are certain situations, including some medical conditions, where the power chair user will need to practice operating the power chair in the presence of a trained attendant. A trained attendant can be defined as a family member or care professional specially trained in assisting a power chair user in various daily living activities.

As you begin using your power chair during daily activities, you will probably encounter situations in which you will need some practice. Simply take your time and you will soon be in full and confident control as you maneuver through doorways, on and off of elevators, up and down ramps, and over moderate terrain.

Below are some precautions, tips, and other safety considerations that will help the user become accustomed to operating the power chair safely.

Modifications

Pride has designed and engineered your power chair to provide maximum mobility and utility. A wide range of accessories is available from your authorized Pride provider to further customize your power chair to better suit your needs and/or preferences. However, under no circumstances should you modify, add, remove, or disable any feature, part, or function of your power chair.

WARNING! Do not modify your power chair in any way not authorized by Pride. Unauthorized modifications may result in personal injury and/or damage to your power chair.

Pre-Ride Safety Check

Get to know the feel of your power chair and its capabilities. Pride recommends that you perform a safety check before each use to make sure your power chair operates smoothly and safely. See X. “Care and Maintenance.”

Perform the following inspections prior to using your power chair:

- Check for proper tire inflation. Maintain 30-35 psi in each tire (if equipped with pneumatic tires).
- Check all electrical connections. Make sure they are tight and not corroded.
- Check all controller connections to the electronics tray. Make sure they are secured properly.
II. SAFETY

- Check the brakes. See X. “Care and Maintenance.”
- Check battery charge. See IX. “Batteries and Charging.”

NOTE: If you discover a problem, contact your authorized Pride provider for assistance.

Weight Limitations
Your power chair is rated for a maximum weight capacity. Please refer to the specifications table for this limit.

WARNING! Exceeding the weight capacity voids your warranty and may result in personal injury and/or damage to your power chair. Pride will not be held responsible for injuries and/or property damage resulting from failure to observe weight limitations.

WARNING! Do not carry passengers on your power chair. Carrying passengers on your power chair may result in personal injury and/or property damage.

Tire Inflation
If your power chair is equipped with pneumatic tires, you should check or have the air pressure checked at least once a week. Proper inflation pressures will prolong the life of your tires and help ensure the smooth operation of your power chair.

WARNING! It is important that 30-35 psi tire pressure be maintained in pneumatic tires at all times. Do not underinflate or overinflate your tires. Low pressure may result in loss of control, and overinflated tires may burst. Failure to maintain 30-35 psi tire pressure in pneumatic tires at all times may result in tire and/or wheel failure, causing serious personal injury and/or damage to your Jazzy.

WARNING! Inflate your power chair drive tires from a regulated air source with an available pressure gauge. Inflating your tires from an unregulated air source could overinflate them, resulting in a burst tire and/or personal injury.

Incline Information
More and more buildings have ramps with specified degrees of inclination, designed for easy and safe access. Some ramps may have turning switchbacks (180-degree turns) that require you to have good cornering skills on your power chair.

- Proceed with extreme caution as you approach the downgrade of a ramp or other incline.
- Take wide swings with your power chair’s front wheels around any tight corners. If you do that, the power chair’s rear wheels will follow a wide arc, not cut the corner short, and not bump into or get hung up on any railing corners.
- When driving down a ramp, keep the power chair’s speed adjustment set to the slowest speed setting to ensure a safely controlled descent. See VIII. “Operation.”
- Avoid sudden stops and starts.

When climbing an incline, try to keep your power chair moving. If you must stop, start up again slowly and then accelerate cautiously. When driving down an incline, set your power chair to the slowest setting and drive in the forward direction only. If your power chair starts to move down the incline faster than you anticipated or desired, allow it to come to a complete stop by releasing the joystick, then push the joystick forward slightly to ensure a safely controlled descent.
II. SAFETY

WARNING! When climbing an incline, do not zigzag or drive at an angle up the face of the incline. Drive your power chair straight up the incline. This greatly reduces the possibility of a tip or a fall. Always exercise extreme caution when negotiating an incline.

WARNING! You should not travel up or down a potentially hazardous incline (i.e., areas covered with snow, ice, cut grass, or wet leaves).

WARNING! When on any sort of an incline or decline, never place the power chair in freewheel mode while seated on it or standing next to it. Doing so may result in personal injury and/or damage to your power chair.

WARNING! Never travel down an incline backwards. This may result in personal injury.

WARNING! Even though your power chair is capable of climbing slopes greater than those illustrated in figure 1, do not, under any circumstances, exceed the incline guidelines or any other specifications presented in this manual. Doing so could cause instability in your power chair, resulting in personal injury and/or damage to your power chair.

In compliance with the Americans with Disabilities Act of 1990, all handicap public access ramps are required to have a maximum slope of 5°. Therefore, Pride recommends that the maximum slope of an incline you attempt to safely ascend or descend on your power chair does not exceed 5°. See figure 1.

WARNING! Any attempt to climb or descend a slope steeper than 5° may put your power chair in an unstable position and cause it to tip, resulting in personal injury.

Fig. 1. Maximum Safe Angle (Ascending and Descending)

Braking Information
Your power chair is equipped with two powerful brake systems:
1. Regenerative — uses electricity to rapidly slow the vehicle when the joystick returns to the center/stop position.
2. Disc Park Brake — activates mechanically after regenerative braking slows the vehicle to near stop, or when power is removed from the system for any reason.

Cornering Information
While your power chair is equipped with rear caster wheels in back and anti-tip wheels in front, excessively high cornering speeds can still create the possibility of tipping. Factors which affect the possibility of tipping include, but are not limited to: cornering speed, steering angle (how sharply you are turning), uneven road surfaces, inclined road surfaces, riding from an area of low traction to an area of high traction (such as passing from a grassy area to a paved area – especially at high speed while turning), and abrupt directional changes. High cornering speeds are not recommended. If you feel that you may tip over in a corner, reduce your speed and steering angle (i.e., lessen the sharpness of the turn) to prevent your power chair from tipping.
II. SAFETY

WARNING! When cornering sharply, reduce your speed. This greatly reduces the possibility of a tip or fall. To avoid personal injury and/or property damage, always exercise common sense when cornering.

Outdoor Driving Surfaces
Your power chair is designed to provide optimum stability under normal driving conditions—dry, level surfaces composed of concrete, blacktop, or asphalt. However, Pride recognizes that there will be times when you will encounter other surface types. For this reason, your power chair is designed to perform admirably on packed soil, grass, and gravel. Feel free to use your power chair safely on lawns and in park areas.

- Reduce your power chair’s speed when driving on uneven terrain and/or soft surfaces.
- Avoid tall grass that can entangle the running gear.
- Avoid loosely packed gravel and sand.
- If you feel unsure about a driving surface, avoid that surface.

Freewheel Mode
Your power chair is equipped with a manual freewheel lever to allow for manual maneuverability by a trained attendant. For more information about how to place your power chair into and out of freewheel mode, see IV. “The Jet I HD.”

WARNING! Do not use your power chair in freewheel mode without an attendant present. Personal injury may result.

WARNING! Do not attempt to personally place your power chair in freewheel mode while seated on it. Personal injury may result. Ask an attendant for assistance if necessary.

WARNING! Do not place your power chair in freewheel mode while on an incline. The chair could roll uncontrollably on its own, causing personal injury.

Stationary Obstacles (Steps, Curbs, etc.)
Proceed with extreme caution when driving near raised surfaces, unprotected ledges and/or drop-offs (curbs, porches, stairs, etc.). The correct method for approaching a curb is illustrated in figure 2.

WARNING! Do not attempt to have your power chair climb or descend an obstacle that is higher than two inches unless you have the assistance of an attendant.

WARNING! Do not attempt to have your power chair proceed backward down any step, curb, or other obstacle. This may cause the power chair to tip and cause personal injury.
II. SAFETY

Figure 2. Curb Approach (Correct and Incorrect)

Public Streets and Roadways

WARNING! You should not operate your power chair on public streets and roadways. Be aware that it may be difficult for traffic to see you when you are seated on your power chair. Obey all local pedestrian traffic rules. Wait until your path is clear of traffic, and then proceed with extreme caution.

Stairs and Escalators

Power chairs are not designed to travel up or down stairs or escalators. Always use an elevator.

WARNING! Never use your power chair to negotiate steps or escalators. You may cause injury to yourself and to others and/or damage your power chair.

Doors

- Determine if the door opens toward or away from you.
- Drive your power chair gently and slowly forward to push the door open. Or drive your power chair gently and slowly backward to pull the door open.

Elevators

Modern elevators have a door edge safety mechanism that, when pushed, reopens the elevator door(s).

- If you are in the doorway of an elevator when the door(s) begin to close, push on the rubber door edge or allow the rubber door edge to contact the power chair and the door will reopen.
- Use care that pocketbooks, packages, or power chair accessories do not become caught in elevator doors.

EMI & RFI

Laboratory tests performed by the Food and Drug Administration (FDA) have shown that radio waves can cause unintended motion of electric mobility vehicles. Radio waves are a form of electromagnetic energy (EM). When EM adversely affects the operation of an electronic device, it is called Electromagnetic Interference (EMI) or Radio Frequency Interference (RFI). For more information, see III. “EMI/RFI.”
II. SAFETY

Lift/Elevation Products
If you will be traveling with your power chair, you may find it necessary to use a lift/elevation product to aid in transportation. Pride recommends that you closely review the instructions, specifications, and safety information set forth by the manufacturer of the lift/elevation product before using that product.

Motor Vehicle Transport
Currently, there are no standards approved for tie-down systems in a moving vehicle of any type to transport a person while seated in a power chair.

Transfers
Transferring onto and off of your power chair requires a good sense of balance. Always have an attendant or healthcare professional present while learning to properly transfer yourself.

To eliminate the possibility of injury, Pride recommends that you or a trained attendant perform the following tasks before attempting a transfer:
- Turn the power off. See VIII. “Operation.”
- Ensure your power chair is not in freewheel mode. See IV. “The Jet 1 HD.”
- Turn both casters toward the transfer destination to improve power chair stability during transfer.
- Make sure both armrests are flipped up or removed from your power chair.
- Flip the footrest up, or move the leg rests aside; this will help to keep your feet from getting caught on the footrest or the leg rests during the transfer.
- Reduce the distance between your power chair and the object you are transferring onto.

WARNING! Before transferring, position yourself as far back as possible in the power chair seat to prevent the power chair from tipping forward during transfer and causing injury.

WARNING! Avoid using your armrests for weight bearing purposes. Such use may cause the power chair to tip and cause personal injury.

WARNING! Avoid putting all of your weight on the footrest. Such use may cause the power chair to tip and cause personal injury.

Positioning Belts
Your authorized Pride provider, therapist(s), and other healthcare professionals are responsible for determining your requirement for a positioning belt in order to operate your power chair safely.

WARNING! If you require a positioning belt to safely operate your power chair, make sure it is fastened securely. Serious personal injury may result if you fall from the power chair.

WARNING! The positioning belt is not designed for use as a seat belt in a motor vehicle. Nor is your Jazzy suitable for use as a seat in any vehicle. Anyone traveling in a vehicle should be properly belted into seats approved by the vehicle manufacturer.

WARNING! Do not sit on your power chair while it is in a moving vehicle. Personal injury and/or property damage may result.
II. SAFETY

WARNING! Always be sure your power chair and its batteries are properly secured when it is being transported. Failure to do so may result in personal injury and/or damage to your power chair.

Inclement Weather Precautions

WARNING! Pride recommends that you do not operate your power chair in icy or slippery conditions or on salted surfaces (i.e., walks or roads). Such use may adversely affect the performance and safety of your power chair, resulting in an accident and personal injury.

WARNING! Do not expose your power chair to any type of moisture at any time (rain, snow, mist, or wash). Such exposure can damage your power chair. Never operate your power chair if it has been exposed to moisture until it has dried thoroughly.

Reaching and Bending

Never reach, lean, or bend while driving your power chair. If it is absolutely necessary to reach, lean, or bend while seated on your power chair, it is important to maintain a stable center of gravity and keep the power chair from tipping. Pride recommends that the power chair user determine his/her personal limitations and practice bending and reaching in the presence of a qualified healthcare professional.

WARNING! Do not bend, lean, or reach for objects if you have to pick them up from the floor by reaching down between your knees. Movements such as these may change your center of gravity and the weight distribution of the power chair. This may cause your power chair to tip, possibly resulting in personal injury. Keep your hands away from the tires when driving.

Batteries

In addition to following the warnings below, be sure to comply with all other battery handling information. For more information about your power chair’s batteries, see IX. “Batteries and Charging.”

WARNING! Power chair batteries are heavy. See specifications table. If you are unable to lift that much weight, be sure to get help. Lifting beyond your capacity can result in personal injury.

WARNING! Battery posts, terminals, and related accessories contain lead and lead compounds. Wash hands after handling.

WARNING! Always protect the batteries from freezing and never charge a frozen battery. Charging a frozen battery may result in personal injury and/or damage to the battery.

Preventing Unintended movement

WARNING! If you anticipate being seated in a stationary position for an extended period of time, turn off the power. This will prevent unexpected motion from inadvertent joystick contact. This will also eliminate the possibility of unintended chair movement from electromagnetic (EM) sources. Failure to do so may result in personal injury.
II. SAFETY

Prescription Drugs/Physical Limitations
Users must exercise care and common sense when operating a power chair. This includes awareness of safety issues when taking prescribed or over-the-counter drugs or when the user has specific physical limitations.

![WARNING! Consult your physician if you are taking prescribed or over-the-counter medication or if you have certain physical limitations. Some medications and limitations may impair your ability to operate your power chair in a safe manner.]

Alcohol
The power chair user must exercise care and common sense when operating his/her power chair. This includes awareness of safety issues while under the influence of alcohol.

![WARNING! Do not operate your power chair while you are under the influence of alcohol, as this may impair your ability to operate your power chair in a safe manner.]

Removable Parts

![WARNING! Do not attempt to lift or move a power chair by any of its removable parts. Personal injury and/or damage to the power chair may result.]
III. EMI/RFI

EMI/RFI
Laboratory tests performed by the Food and Drug Administration (FDA) have shown that radio waves can cause unintended motion of power chairs. Radio waves are a form of electromagnetic energy. When this energy adversely affects the operation of an electronic device, it is called *Electromagnetic Interference (EMI)* or *Radio Frequency Interference (RFI).*

**WARNING!** Radio waves may interfere with the control of power chairs.

Frequently Asked Questions (FAQs)
The following FAQs summarize what you should know about EMI/RFI. Use this information to minimize the risk that EMI/RFI will affect your power chair.

Where do radio waves come from?
Radio waves are emitted from the antennas of cellular phones, mobile two-way radios (such as walkie-talkies), radio stations, TV stations, amateur radio (HAM) transmitters, wireless computer links, microwave sources, and paging transmitters. Radio waves are a form of electromagnetic energy (EM). Because electromagnetic energy is more intense closer to the transmitting antenna (source of emission), the EM fields from two-way radios are of special concern to power chair users.

If my power chair is affected by EMI/RFI, what kind of motion should I expect?
This is hard to predict. It would depend on a number of factors:
- Strength of the radio waves
- Construction of the power chair
- Position of the power chair (whether it is on level ground or on an incline)
- Whether or not the power chair is in motion

An affected power chair’s movement can be erratic. It may move by itself or come to a sudden stop. Furthermore, it is possible for EMI/RFI to unexpectedly release the brakes on a power chair. Some intense sources of EMI/RFI can even damage the control system of the Jet.

Is there any way to know for sure whether radio waves are responsible for the unintended motion of my power chair?
Unfortunately, interference from radio wave sources may be difficult to recognize, since the signals from these sources are invisible and may be intermittent. However, the FDA recommends that you report all incidents of unintended motion or brake release to the power chair manufacturer, and, if possible, note whether there was a radio wave source nearby at the time of the incident.

Has anyone been hurt from erratic, unintended motion of power chairs?
The FDA has reports of injuries that resulted from the apparent uncontrolled motion of power chairs. However, it is unclear how many of these incidents were actually caused by radio wave interference.
III. EMI/RFI

Are all power chairs susceptible to EMI/RFI?
Each make and model of chair differs in its ability to resist electromagnetic interference. That is, each has a particular level of “immunity” to interference, measured in volts per meter (Vm). A higher immunity level offers greater protection. In other words, a power chair with a high immunity level is less likely to be affected by a strong radio source than one with a low immunity level.

What is the FDA doing about the problem?
The FDA has written to the manufacturers of power chairs and requested that they test their new products to be sure that they provide a reasonable degree of immunity against EMI/RFI. The letter states that power chairs should have an immunity of at least 20 V/m. This provides a reasonable degree of protection against the common sources of EMI/RFI.

The FDA has also requested that these manufacturers clearly label their products with the immunity level, or state that the immunity level is not known. The labeling and informational material supplied with the power chair must explain what the immunity level means, and the labeling or informational material must warn users about the possibility of EMI/RFI and how to avoid it. In addition, the FDA has recommended that manufacturers establish an educational program to inform users of power chairs, and their caregivers, about the problems associated with EMI/RFI, and the actions they can take to minimize the risk.

What can I do to find out if my power chair is likely to be affected by EMI/RFI?
If you’ve had your power chair for a long time and haven’t experienced any unintended motion, it is not likely that you will have problems in the future. But it is always possible that problems could arise if you are close to a source of radio waves. Therefore, it is very important to be alert to this possibility. The Jet meets or exceeds an immunity level of at least 20 V/m.

What can I do to reduce the risk that my power chair could be affected by EMI/RFI?
Here are some precautions you can take:
- Do not turn on or use hand-held personal communications devices, such as citizens band (CB) radios and cellular phones, while the power chair is on.
- Be aware of nearby transmitters, such as radio or TV stations and hand-held or mobile two-way radios, and try not to come close to them. For example, if you are in a power chair with an immunity level of 20 V/m, you should remain at least three feet from a hand-held two-way radio and ten feet from a mobile two-way radio.
- Be aware that adding accessories and/or components, or modifying the power chair may make it more susceptible to interference from radio wave sources. There is no easy way to evaluate their effect upon the overall immunity of the power chair.

What should I do if my power chair moves unexpectedly?
If unintended motion or brake release occurs, turn the power chair off as soon as it is safe to do so. Call Pride at 800-424-8205 to report the incident.
IV. THE JET 1 HD

THE JET 1 HD
The Jet has two main assemblies: the seat and the power base. See figures 2, 2a, and 3. Typically, the seating assembly includes the armrests, seat-back, seat base, and a controller. The Jet seat may also have some optional accessories attached to it, such as a basket, a cane/crutch holder, or a cup holder. See XI. “Optional Accessories.”

The power base is the heart of the Jet. The power base assembly includes two motor/brake assemblies, two gearboxes, two drive wheels, two anti-tip wheels, two rear casters, two batteries, and all wiring harnesses.

Electronics Tray
The electronics tray is located on the back of the power base. See figure 4. The ammeter, the onboard charger AC power cord receptacle, the main circuit breaker, the controller connector, and the charger inhibit connector are all located on the electronics tray.

Ammeter: The ammeter displays the charger’s current output in amps. See IX. “Batteries and Charging.”

Main Circuit Breaker: The main circuit breaker is a safety feature built into your Jet. When the batteries and the motors are heavily strained (e.g., from excessive loads), the main circuit breaker trips to prevent damage to the motors and the electronics. If the circuit trips, allow your Jet to “rest” for approximately one minute. Next, push in the circuit breaker button, turn on the controller, and continue normal operation. If the main circuit breaker continues to trip repeatedly, contact your authorized Pride provider.

Onboard Battery Charger AC Power Cord Receptacle: This is where the AC power cord plugs into the onboard charger.

Controller Connector: This is where the controller connects to the power base.

Charger Inhibit Connector: Your power chair is equipped with a charger inhibit connector. The charger inhibit enables the onboard charger to disable the controller during charging. The charger inhibit connector is coded with colored dots. The dots are positioned so that you can align the flat side of the male connector with the flat side of the female connector before making the connection.

CAUTION! Failure to properly align the connectors can result in damage to the controller, the charger harness, and the connectors.
**IV. THE JET 1 HD**

**Freewheel Levers**
For your convenience, the Jet is equipped with two freewheel levers located under the front of your seat. See figures 5 and 6. These levers allow you to disengage the drive motors and maneuver the chair manually.

⚠️ **WARNING!** Do not use the Jet while the drive motors are disengaged unless you are in the presence of an attendant! Do not disengage the drive motors when the Jet is on an incline. The chair could roll down on its own, causing injury!

**To engage or disengage the freewheel feature:**
1. Turn the freewheel levers rearward to disengage the drive motors. See figure 5.
2. Turn the freewheel levers inward, to engage the drive motors. See figure 6.

⚠️ **CAUTION!** It is important to remember that when your Jet is in freewheel mode, the braking system is disengaged.

If a lever is difficult to move in either direction, rock your Jet back and forth slightly. The lever should then move to the desired position.

![Figure 5. Drive Disengaged](image1)

![Figure 6. Drive Engaged](image2)
To reduce the possibility of shipping damage, your Jet’s seat is removed from the power base, and the seat back is removed from the seat assembly before your Jet is shipped. The joystick may also have been removed from the armrest. The following is a set of instructions to help you quickly and easily prepare your Jet for immediate use.

**WARNING!** Do not pick up the seat frame by the armrests. They are free to pivot, and you may lose control of the seat if they do so, resulting in personal injury and/or damage to the chair.

**Seatback Assembly**
The seat-back mounts to the back hinges with four (4) screws. To get to the hinges, lift up the reusable fastener flap which covers the hinges on the back of the seat. You may install the seat-back before or after you install the seat to the power base.

**To mount the seat-back to the hinge:**
1. Line up the hinges with the holes in the seat-back. See figure 7.
2. Insert the seat-back mounting screws through the hinge and into the seat-back.
3. Tighten the four screws.

![Figure 7. Seat-back Assembly](image)
V. ASSEMBLY

Seat Installation
To install the seat:
1. Set the seat on the seat post. See figure 8.
2. Push the seat down until the latch engages. See figure 9.
3. Plug the controller and charger inhibit into the connector on the electronics tray. See figure 10.

Charger Inhibit Plug Connection
The charger inhibit connector, located on the electronics tray, is coded with colored dots. The dots are positioned so that the flat side of the male connector aligns with the flat side of the female connector while making the connection. See figure 11.

WARNING! Failure to properly align the connectors can result in damage to the controller, the charger, the charger harness and the connectors.

Controller Installation
Your Jet may have been shipped without the controller installed in the armrest.

To install the controller:
1. Use a 3/16 in. hex key to loosen the setscrew. See figure 12.
2. Slide the controller mounting bracket into or out of the armrest to the desired position.
3. Retighten the setscrew by turning it clockwise.

CAUTION! Do not place the controller cable so that it can be pinched in the seat frame or the power base frame.

Figure 8. Seat Post

Figure 9. Seat Installation

Figure 10. Electronics Tray Connections

PLUG IN CONTROLLER (A) AND CHARGER INHIBIT (B).
V. ASSEMBLY

Figure 11. Charger Inhibit Connector

Figure 12. Controller And Bracket
VI. COMFORT ADJUSTMENTS

COMFORT ADJUSTMENTS
After you have become familiar with your Jet’s operation, you may find the need to adjust the seat. There are some adjustments you can make to increase your comfort such as seat height and angle, armrest height and angle, footrest height and angle, and joystick position.

WARNING! If your Jet was configured at your authorized Pride provider, please consult your healthcare professional before changing the seat position or making any other adjustment. Some adjustments may degrade your Jet’s performance and safety by changing its center of gravity.

Seat Height
You can change the seat height manually.

To change the seat height:
1. Remove the seat. See VII. “Disassembly.”
2. Remove the nut and bolt from the seat post. See figure 13.
3. Raise or lower the seat post to the desired position.
4. Install the nut and bolt into the seat post.
5. Install the seat.

Armrest Width Adjustment
To change the armrest width:
1. Locate the two setscrews on the armrest receiver bracket. See figure 14.
2. Loosen the setscrews and slide the armrests in or out for the desired width.
3. Tighten the setscrews.

Figure 13. Seat Post Nut And Bolt

Figure 14. Armrest Width and Height
VI. COMFORT ADJUSTMENTS

Armrest Height Adjustment (optional)
Your Jet may be equipped with height-adjustable armrests. See figure 15.

To change the armrest height:
1. Loosen the setscrew located underneath the armrest.
2. Raise or lower the armrest to the desired position.
3. Tighten the setscrew.

Armrest Angle Adjustment
You can adjust the armrest angle to fit your specific needs. See figure 16.

To change the armrest angle:
1. Lift the armrest straight up so that it is perpendicular to the floor.
2. Use a 1/2-in. wrench to loosen the jam nut. See figure 16.
3. Use a 1/2-in. wrench to loosen the adjusting screw.
4. Turn the screw clockwise to lower the front of the armrest, or turn the screw counterclockwise to raise the front of the armrest.
5. Lock the adjusting screw into place by tightening the jam nut.

Controller Extension Adjustment
The controller can easily slide out away from the armrest, or in toward the armrest. See figure 16.

To extend the controller:
1. Use a 5 mm hex key to loosen the setscrew.
2. Slide the joystick mounting bracket into or out of the armrest to the desired position.
3. Tighten the setscrew.
VI. COMFORT ADJUSTMENTS

Footrest Height
The footrest height is easily adjusted to one of six different heights in 1-inch increments.

To raise or lower the footrest:
1. Remove the two 7/16-in. bolts and their nuts from the footrest. See figure 17.
2. Raise or lower the footrest to the desired height.
3. Install the two 7/16-in. bolts and nuts into the footrest and tighten.

Footrest Angle
You can adjust the angle of the footrest with a 7/32-in. hex key and a 1/2-in. box wrench. See figure 18.

To adjust the footrest angle:
1. Loosen the jam nut.
2. Turn the setscrew clockwise to lower the front of the footrest.
3. Turn the setscrew counterclockwise to raise the front of the footrest.
4. Tighten the jam nut.

Swing-away Footrests Option
Swing-away Footrests (SFRs) are an option. They enable you to move the footrests to the side before getting off your Jet.

To move the SFRs:
1. Push in the release lever. See figure 19.
2. Move the SFRs.

Elevating Leg Rests Option
Elevating Leg Rests (ELRs) offer an infinite range of adjustment for the leg angle and a footrest adjustment range of 12 – 19 in.

To adjust the ELR angle:
1. Press the release lever. See figure 20.
2. Move the leg rest to the desired angle.

To adjust the ELR footrest length:
1. Remove the two screws from the side of each leg rest extension. See figure 21.
2. Loosen the bolt on the side of each leg rest extension.
VI. COMFORT ADJUSTMENTS

3. Slide the leg rest in or out to the desired length.
4. Tighten the bolt and reinstall the two screws on each leg rest extension.

Anti-Tip Wheel Adjustment
The anti-tip wheels are designed to give your Jet increased stability on rough surfaces. The anti-tip wheels are preset at the factory to a height of 3/4 in. off the ground. This setting is for smooth surfaces or indoor use only. If you plan on using your Jet on rough surfaces, it may be necessary to adjust the anti-tip wheels to better suit your needs.

The anti-tip wheels may need adjustment if either of the following occur:
- When coming to a stop, your Jet tips forward excessively.
- The anti-tip wheels constantly rub the ground.

Required Tool: 13-mm wrench

NOTE: Each drive tire must have at least 30 psi of air pressure in order for the anti-tip wheels to be properly adjusted.

WARNING! Consult your authorized Pride provider before attempting to adjust the anti-tip wheel height! Changing the anti-tip wheel height affects handling under deceleration!

To adjust the anti-tip wheels:
1. Remove the seat and body shroud. See VII. “Disassembly.”
2. Adjust the anti-tip adjustment nut so that the anti-tip wheel is 1/2 to 1 inch off of the ground. Turn the nut clockwise to raise the anti-tip wheel and counterclockwise to lower the anti-tip wheel. See figure 22.

WARNING! The higher you raise the anti-tip wheels, the more you increase your power chair's tendency to tilt forward when coming to a stop. You can compensate for this by having your authorized Pride provider make a small adjustment to the pre-programmed deceleration setting in the controller or by moving the seat assembly further to the rear of your power chair.
Seat Removal
You may wish to remove the seat for transportation. See figure 23.

To remove the seat:
1. Turn the power off.
2. Make sure your Jet is not in freewheel mode. See IV. “The Jet 1 HD.”
3. Unplug the connectors from the electronics tray.
4. Push the lever located underneath the seat toward the front of the seat. If the controller is on the right, swivel the seat clockwise and then pull the seat upward. If the controller is on the left, swivel the seat counterclockwise and then pull the seat upward.

Body Shroud Removal
The body shroud is a one-piece, molded plastic body that covers the power base frame. It helps protect the Jet components from the environment. You must remove the body shroud in order to change the batteries and check the cable connections.

To remove the body shroud:
1. Turn the power off.
2. Make sure your Jet is not in freewheel mode. See IV. “The Jet 1 HD.”
3. Unplug the connectors from the electronics tray.
4. Remove the seat.
5. Lift the body shroud straight up. The body shroud is attached to the metal frame by a reusable fastener. The body shroud should lift up easily.
The electronic controller is what you use to operate your power chair. It takes the battery voltage and sends it to the appropriate system. For example, when the electronic controller power is on and you move the joystick, you send battery voltage to the motors to move your power chair. The electronic controller also enables you to monitor battery charge, electronic controller functions, and the condition of your electrical system. Also, it may be used to control some optional systems such as power elevating seats and lights.

**Pilot Controller**
The Pilot electronic controller is an integral electronic controller. All of the electronics necessary to operate the power chair are contained in one module. See figure 24a.

The Pilot consists of:

1. joystick
2. on/off button
3. battery gauge
4. speed control
5. charger socket
6. 9-pin Beau connector
7. 3-pin charger inhibit connector

Typically, the Pilot is mounted to one of the armrests and is connected to the motors, batteries, and the onboard charger at the electronics tray.

**Joystick**
The joystick controls the direction and speed of your power chair. When you move the joystick from the center (neutral) position, the electromagnetic brakes release and allow your power chair to move. The further you push the joystick from its center position, the faster your power chair moves. When you release the joystick and allow it to return to the center position, you engage the electromagnetic brakes. This causes your power chair to decelerate and come to a complete stop.

[![](image)]

**WARNING!** If your power chair begins to move in an unexpected manner, immediately release the joystick. Unless the joystick is damaged, this action should stop your power chair.

**On/Off button**
This is a green button located in front of the joystick. It turns Pilot on and off.

[![](image)]

**WARNING!** Unless faced with an emergency situation, do not use the on/off push button to stop the chair. This will cause the power chair to stop abruptly.

**WARNING!** Always turn the power off when you are stationary to prevent unexpected movement.

**Battery Gauge**
The battery gauge is located immediately in front of the joystick. This is a 10-segment illuminated display that indicates that the Pilot is turned on and also gives the battery status, the Pilot status, and the electrical system status.
VIII. OPERATION

- **Red, yellow, and green lights lit:** Battery charged; Pilot and electrical system OK.
- **Red and yellow lights lit:** Charge battery if possible; Pilot and electrical system OK.
- **Red lights only lit or slow flash:** Charge battery as soon as possible; Pilot and electrical system OK.
- **Rapid flash of lights:** Indicates a fault in the Pilot or the electrical system. Refer to “Pilot Error Codes.”
- **Ripple up and down of lights:** The joystick was not in the center position when the Pilot was turned on.

**NOTE:** If you get “Ripple up and down of lights,” turn off the Pilot, allow the joystick to return to the center position, then turn on the Pilot.

**NOTE:** When the batteries approach a discharged state, the first red light will begin to slowly flash, reminding you the batteries need to be charged immediately!

**Speed Control**
Sets the maximum speed of the power chair: clockwise to increase, counterclockwise to decrease.

**NOTE:** We recommend that the first few times you operate your power chair, you turn the speed control to the slowest setting until you become familiar with your new power chair.

**Charger Socket**
You may use an off-board charger to charge the power chair batteries through the 3-pin socket located on the front of the Pilot. If you use an off-board charger, the charger current should not exceed 13 amps. Contact your authorized Pride provider for more information.

⚠️ **CAUTION!** Only chargers with Neutrik NC3MX plugs should be connected to the charger socket. See your authorized Pride provider for more information.

**NOTE:** The socket may also be used for re-programming the Pilot. Contact your authorized Pride provider for more information.

**9-pin Beau Connector**
This connects the Pilot to the power chair’s batteries, motors, and motor brakes.

**3-pin Charger Inhibit Connector**
This connects the Pilot to the onboard battery charger. This connection provides an inhibit that disables the Pilot when the battery charger is on. The charger inhibit connector is coded with colored dots. The dots are positioned so that you align the flat side of the male connector with the flat side of the female connector before making the connection.

⚠️ **CAUTION!** Failure to properly align the connectors can result in damage to the Pilot, the charger harness, and the connectors.

**Thermal Rollback**
The Pilot is equipped with a thermal rollback circuit. This circuit monitors the temperature of the motors and the Pilot. In the event that either one of the motors or the Pilot becomes excessively hot (above 122° F), the Pilot reduces the motor voltage. For every degree above 122° F, the controller reduces the voltage by 5 volts. This reduces your power chair’s speed and allows the electrical components to cool down. When the temperature returns to a safe level, your power chair resumes its normal speed.
**WARNING!** Under strenuous driving conditions, it is possible for the bottom and side case temperature of the Pilot to exceed 105° F. DO NOT touch the side or bottom of the controller under these circumstances.

**Troubleshooting**
The Pilot is designed with the user’s safety as the prime consideration. It incorporates many sophisticated self-test features which search for potential problems at a rate of 100 times per second. If the Pilot detects a problem either in its own circuits or in the power chair’s electrical system, it may decide to stop the power chair, depending on the severity of the problem. The Pilot is designed to maximize the user’s safety under all normal conditions. The table below identifies the individual error codes. If you get one of these codes, contact your authorized Pride provider.

VIII. OPERATION

VSI CONTROLLER

The electronic controller is what you use to operate your power chair. It takes the battery voltage and sends it to the appropriate system. The electronic controller enables you to move the power chair, as well as monitor battery charge, electronic controller functions, and the condition of your electrical system. Also, it may be used to control some optional systems such as power elevating seats and lights.

The VSI controller is an integral electronic controller. All of the electronics necessary to operate the power chair are contained in one module. See figure 24b.

The VSI consists of:
1. joystick
2. keypad (see figure 25)
3. off-board charger/programming socket
4. actuator connector (optional)
5. controller connector
6. 3-pin charger inhibit connector

Typically, the VSI is mounted to one of the armrests and is connected to the motors, batteries, and the onboard charger at the electronics tray.

Joystick
The joystick controls the direction and speed of your power chair. When you move the joystick from the neutral (center) position, the electromagnetic brakes release and allow your power chair to move. The further you push the joystick from its neutral position, the faster your power chair moves. When you release the joystick and allow it to return to the neutral position, you engage the electromagnetic brakes. This causes your power chair to decelerate and come to a complete stop.

WARNING! If your power chair begins to move in an unexpected manner, immediately release the joystick. Unless the joystick is damaged, this action should stop your power chair.

Keypad
The keypad is located in front of the joystick. It contains keys necessary to operate your power chair. See figure 25.
On/Off Key
The on/off key turns the VSI on and off.

**WARNING!** Unless faced with an emergency situation, do not use the on/off key to stop the chair. This will cause the power chair to stop abruptly.

**WARNING!** Always turn the power off when you are stationary to prevent unexpected movement.

Battery Condition Meter
The battery condition meter is located in front of the joystick. See figure 25. This is a 10-segment illuminated display that indicates that the VSI is turned on and also gives the battery status, the VSI status, and the electrical system status.

- **Red, yellow, and green lights lit:** Battery charged; VSI and electrical system OK.
- **Red and yellow lights lit:** Charge battery if possible; VSI and electrical system OK.
- **Red lights only lit or slow flash:** Charge battery as soon as possible; VSI and electrical system OK.
- **Rapid flash of lights:** Indicates a fault in the VSI or the electrical system. Refer to “VSI Error Codes.”
- **Ripple up and down of lights:** The joystick was not in the neutral position when the controller was turned on. If you get “ripple up and down of lights”, turn off the controller, allow the joystick to return to the neutral position, then turn on the controller.

**NOTE:** If you still get “ripple up and down of lights”, contact your authorized Pride provider.

**NOTE:** When the batteries approach a discharged state, the first red light will begin to slowly flash, reminding you the batteries need to be charged immediately!

Speed/Profile Keys
There are two keys that control either the speed or the profile. See figure 25. This depends on how your VSI was programmed. Press the speed/profile increase key to increase the speed or change the profile. Press the speed/profile decrease key to decrease the speed or change the profile. The speed/profile setting is displayed on the maximum speed/profile indicator. If your power chair was programmed with a drive profile, contact your authorized Pride provider for more information.
NOTE: We recommend that the first few times you operate your power chair, you set the speed to the slowest setting until you become familiar with your new power chair.

**Actuator Keys and Actuator Lights (for optional equipment)**
Actuator keys and actuator lights are used for optional equipment such as power elevating seats or power elevating leg rests. For specific operation of the actuator keys and actuator lights, contact your authorized Pride provider. See figure 25.

**Horn Key**
The horn key activates the horn. See figure 25.

**Off-board Charger/Programming Socket**
You may use an off-board charger to charge the power chair batteries through the 3-pin socket located on the front of the VSI. See figure 24b. If you use an off-board charger, the charger current should not exceed 12 amps. Contact your authorized Pride provider for more information.

⚠️ **CAUTION!** Only chargers with Neutrik NC3MX plugs should be connected to the off-board charger/programming socket. See your authorized Pride provider for more information.

NOTE: The socket may also be used for reprogramming the VSI. Contact your authorized Pride provider for more information.

**Controller Connector**
This connects the VSI to the power chair’s batteries, motors, and motor brakes.

**3-pin Charger Inhibit Connector**
This connects the VSI to the onboard battery charger. This connection provides an inhibit that disable the VSI when the battery charger is on. The charger inhibit connector is coded with colored dots. The dots are positioned so that you align the flat side of the male connector with the flat side of the female connector before making the connection.

⚠️ **CAUTION!** Failure to properly align the connectors can result in damage to the VSI, the charger, and the connectors.

**Thermal Rollback**
The VSI controller is equipped with a thermal rollback circuit. The circuit monitors the temperature of the controller, which roughly translates to motor temperature. In the event that the VSI controller becomes excessively hot (above 140°F), motor current (amperage) is reduced. For every degree above 140°F, the motor current limit is reduced by .55 amps until the VSI controller reaches 158°F, at which time the current output is reduced to zero. This reduces your power chair’s “power,” which could also reduce your power chair’s speed, and allows the electrical components and motors to cool down. When the temperature returns to a safe level, your power chair resumes its normal operation.
Troubleshooting
The VSI controller is designed with the user’s safety as the prime consideration. It incorporates many sophisticated self-test features which search for potential problems at a rate of 100 times per second. If the VSI detects a problem either in its own circuits or in the power chair’s electrical system, it may stop the power chair, depending on the severity of the problem. The VSI is designed to maximize the user’s safety under all normal conditions. The table below identifies the individual error codes. Error codes are displayed as a rapid flashing of the lights. If you get one of these error codes, contact your authorized Pride provider.

IX. BATTERIES AND CHARGING

BATTERIES
The Jet uses two long-lasting, 12-volt, deep-cycle batteries. These batteries are sealed and maintenance free. Since they are sealed, there is no need to check the electrolyte (fluid) level. Deep-cycle batteries are designed to handle a longer and deeper discharge. Though they are similar in appearance to automotive batteries, they are not interchangeable. Automotive batteries are not designed to handle a long, deep discharge, and also are unsafe for use in power chairs.

WARNING! Battery posts, terminals, and related accessories contain lead and lead compounds. Wash hands after handling.

WARNING! Always protect batteries from freezing temperatures and never charge a frozen battery. This damages the battery and may cause personal injury. Attempting to charge a battery in freezing conditions does not prevent a battery from freezing.

Charging the Batteries
The battery charger is essential in providing long life for your Jet batteries. See figure 26. The battery charger is designed to optimize your Jet’s performance by charging the batteries safely, quickly, and easily. The charging system consists of the charger, the charger fuse, and the ammeter. See figures 26 and 27. The onboard charger is located underneath the electronics tray. The ammeter is located on the electronics tray for easy viewing. The charger has an in-line fuse that protects the ammeter. The ammeter indicates the rate of charge necessary to fully recharge the batteries. It is also a good indication of whether or not the charger is working. The ammeter and the charger are only functional when the charger power cord is plugged into a wall outlet.

WARNING! Never use an extension cord to plug in your battery charger. Plug the charger directly into a properly wired standard wall outlet.

WARNING! You must recharge your power chair batteries with the supplied onboard or off-board charging system. Do not use an automotive-type battery charger.

To charge the batteries using the onboard charger:
1. Position the rear of your Jet close to a standard wall outlet.
2. Be certain the controller power is turned off and the freewheel levers are in the engaged position. See IV. “The Jet 1 HD.”

Figure 26. Battery Charger

Figure 27. Electronics Tray
IX. BATTERIES AND CHARGING

3. Remove the battery charger cord from the back pouch of your Jet and plug it into the battery charger AC power cord receptacle located on the electronics tray. See figure 27.

4. Extend the charger AC power cord and plug it into the wall outlet. The Jet incorporates an inhibit function that disables the power chair when the charger is plugged into a wall outlet.

5. The ammeter indicates how much charge is needed to fully charge the batteries. Wait about a minute for the charger to warm up. The ammeter may move as high as 5.5 amps, then gradually move back down to 0 amps as the batteries charge.

6. We recommend you charge the batteries for 8 to 14 hours. As the batteries charge, the ammeter needle slowly drops to 0. When the batteries are fully charged, the needle vibrates on or about the 0 mark on the ammeter scale.

7. When your Jet’s batteries are fully charged, you can unplug the AC power cord from the wall outlet, wind it up using the hook and loop strap, and place the cord back into the Jet’s back pouch.

OFF-BOARD Charger
To charge the batteries using the off-board charger:
1. Position your Jet next to a standard wall outlet.
2. Be certain the controller power is turned off.
3. Remove the run plug located on the electronics tray. This activates the inhibit function.
4. Plug the 3-pin extension cable to the charger, then into the electronics tray connector.
5. Plug the charger into the wall outlet.
6. The ammeter indicates how much charge is needed to fully charge the batteries. Wait about a minute for the charger to warm up. The ammeter should move all the way up to 5 amps, then gradually move back down to zero amps.
7. We recommend you charge the batteries for 8 to 14 hours. As the batteries charge, the ammeter needle will slowly drop to zero. When the batteries are fully charged, the needle vibrates on or about zero on the ammeter scale.
8. When your Jet’s batteries are fully charged, disconnect the charger cord from the wall outlet.
9. Disconnect the charger from the rear electronics tray.
10. Reconnect the run plug into its connector.

NOTE: If the run plug is not reconnected, your Jet will not operate.

Battery Break-in
To break in new batteries for maximum efficiency:
1. Fully recharge any new battery prior to its initial use. This brings the battery up to about 90% of its peak performance level.
2. Operate your Jet throughout the house and yard. Move slowly at first, and don’t stray too far until you become accustomed to the controls and break in the batteries.
3. Give the batteries another full charge of 8 to 14 hours and operate your Jet again. The batteries will now perform at over 90% of their potential.
4. After four or five charging cycles, the batteries will top off at 100% charge and last for an extended period.
IX. BATTERIES AND CHARGING

Frequently Asked Questions (FAQs)

How does the charger work?
The battery charger takes the standard wall outlet voltage of 120 VAC (alternating current) and converts it to 24 VDC (direct current). The Jet batteries use direct current to run your power chair. When the battery voltage is low, the charger works harder to charge the battery. This is why the charging ammeter initially reads five or more amps. As the battery voltage approaches full charge, the charger doesn’t work as hard to complete the charging cycle. This explains why the charging ammeter drops as it approaches a full charge. When the battery is fully charged, the amperage from the charger is nearly at zero. This is how the charger maintains a charge but does not overcharge the battery.

Can I use a different battery charger?
You should use the charger supplied with the Jet. It is the safest, most efficient tool to charge the batteries. We do not recommend using other types of chargers (e.g., an automotive battery charger). Your Jet’s charger will not operate after the batteries have been discharged to nearly zero voltage. If this happens, call your authorized Pride provider for assistance.

How often must I charge the batteries?
Many factors come into play when deciding how often to charge the batteries. You may use your Jet all day on a daily basis or you may not use it for weeks at a time.

Daily Use
If you use your Jet on a daily basis, charge the batteries as soon as you are finished. Your Jet will be ready each morning to give you a full day’s service. It is recommended that you charge the batteries 8 to 14 hours after daily use. Do not charge the batteries for more than 24 hours at a charging cycle.

Infrequent Use
If you use your Jet infrequently (once a week or less), you should charge the batteries at least once per week for 12 to 14 hours.

NOTE: Keep your batteries fully charged and avoid deeply discharging your batteries. Do not charge the batteries for more than 24 hours at a charging cycle.

How can I get maximum range or distance per charge?
Rarely do you have an ideal driving situation such as smooth, flat, hard terrain with no wind, hills, or curves. More often you are presented with hills, sidewalk cracks, uneven and loosely packed surfaces, curves, and wind. All of these factors will affect the distance or running time per battery charge. Below are a few suggestions for obtaining the maximum range per charge:

- Always charge the batteries fully prior to your trip.
- Plan your trip in advance to avoid inclines if possible.
- Limit baggage weight to essential items.
- Try to maintain an even speed and avoid stop-and-go driving.
IX. BATTERIES AND CHARGING

What type of battery should I use?
We recommend deep-cycle batteries that are sealed and maintenance free. Both sealed lead-acid (SLA) and gel cell are deep-cycle batteries that are similar in performance.

Use these specifications to reorder deep-cycle batteries:

<table>
<thead>
<tr>
<th>Battery Specifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type:</td>
</tr>
<tr>
<td>(Deep-cycle sealed lead-acid or gel cell)</td>
</tr>
<tr>
<td>Size:</td>
</tr>
<tr>
<td>NF-22</td>
</tr>
<tr>
<td>Voltage:</td>
</tr>
<tr>
<td>12 V each</td>
</tr>
</tbody>
</table>

WARNING! Corrosive chemicals contained in batteries. Use only AGM or Gel-Cell batteries to reduce the risk of leakage or explosive conditions.

Why do my new batteries seem weak?
Deep-cycle batteries employ a much different chemical technology than that used in car batteries, nickel-cadmium (nicads), or in other common battery types. Deep-cycle batteries are specifically designed to provide power, drain down their charge, and then accept a relatively quick recharge. Lead-acid batteries should be charged as often as possible. They do not have a “memory” like nickel-cadmium batteries.

We work closely with our battery manufacturer to provide a battery that best suits your Jet’s specific demands. Fresh batteries arrive regularly at Pride and are promptly shipped with a full charge. During shipping, the batteries encounter temperature extremes that may influence initial performance. Heat robs the charge from the battery, and cold slows the power available and extends the time needed to recharge the battery (just as with a car battery).

It might take a few days for the temperature of the battery to stabilize and adjust to its new ambient temperature. More importantly, it will take a few “charging cycles” (a partial drain—then a full recharge) to establish the critical chemical balance that is essential to the battery’s peak performance and long life. It will be well worth it to take the time to break in your battery properly.

NOTE: The useful life of a battery is quite often a reflection of the care it receives.

How can I ensure maximum battery life?
A fully charged deep-cycle battery will provide reliable performance and extended battery life. Keep your Jet’s batteries fully charged whenever possible. Batteries that are regularly and deeply discharged, infrequently charged, or stored without a full charge may be permanently damaged causing unreliable Jet operation and limited battery life.
IX. BATTERIES AND CHARGING

How should I store my Jet and its batteries?
If you do not use your Jet regularly, we recommend maintaining battery vitality by charging the batteries at least once per week.

If you do not plan on using your Jet for an extended period, fully charge the batteries prior to storage. Disconnect the battery harnesses and store the Jet in a warm, dry environment. Avoid temperature extremes, such as freezing and excessively hot conditions, and never attempt to charge a frozen battery. A cold or frozen battery should be warmed for several days prior to recharging.

NOTE: If you are storing a Jet for an extended period of time, you may wish to block the unit up with several boards under the frame. This will keep the tires off the ground and prevent the possibility of flat spots developing.

What about public transportation?
Sealed lead-acid and gel cell batteries are designed for application in power chairs and other mobility vehicles. These batteries are Federal Aviation Administration (FAA) approved, allowing safe transportation on aircraft, buses, and trains, as there is no danger of spillage or leakage. We suggest you contact the carrier’s ticket counter in advance to determine that carrier’s specific requirements.

What about shipping?
If you wish to use a freight company to ship your Jet to your final destination, repack your Jet in the original shipping container and ship the batteries in separate boxes.
ROUTINE MAINTENANCE
The Jet is a sophisticated power chair. Like any motorized vehicle, it requires routine maintenance checks. You can perform some of these checks, but others require assistance from your authorized Pride provider. Preventive maintenance is very important. If you follow the maintenance checks in this section as scheduled, you can help ensure that your Jet gives you years of trouble-free operation. If you have any doubt as to your Jet’s care or operation, contact your authorized Pride provider.

! The Jet, like most electrical equipment, is susceptible to damage from the elements. Avoid damp areas of any kind. Direct exposure to water or dampness could cause the power chair to malfunction electronically and mechanically. Water can cause electrical components to corrode and the chair’s frame to rust.

Should your Jet come in contact with water:
1. Dry your Jet as much as possible with a dry towel.
2. Allow your Jet to sit in a warm dry place for twelve hours to allow unseen water to evaporate.
3. Check the joystick operation and the brakes before using your Jet again.
4. If any inconsistencies are found, take your Jet to your authorized Pride provider.

Temperature
Some of the parts of your Jet are susceptible to extreme changes in temperature. Always keep your Jet between the temperatures of 18° F and 122° F.

- In extremely cold temperatures the batteries may freeze. The specific temperature at which they will freeze depends on a number of factors, such as battery charge, usage, and composition of the batteries (e.g., sealed lead-acid or gel cell).
- Temperatures above 122° F may cause your Jet to operate at a reduced speed. This is a safety feature built into the controller that helps prevent damage to the motor and other electrical components. See VIII. “Operation.”

General Guidelines
- Avoid knocking or bumping the controller, especially the joystick.
- Avoid prolonged exposure of your Jet to extreme conditions, such as heat, cold, or moisture.
- Keep the controller clean.
- Check all controller connectors on the electronics tray to ensure that they are all tight and secured properly. Also check the charger inhibit connector.
- When the battery gauge is completely lit, the batteries are fully charged, and the controller and the electrical system are OK.
- If two red bars on the battery gauge are blinking slowly, the batteries are low and need to be charged, but the controller and the electrical system are OK.
- If the battery gauge is blinking rapidly, the controller has detected a fault in either its own circuits or in your Jet’s circuits. See VIII. “Operation.”

WARNING! Make sure your tires are inflated to 30-35 psi. Do not underinflate or overinflate your tires. Low pressure may result in loss of control, and overinflated tires may burst. Serious personal injury may result. Overinflating tires can cause them to explode and can result in personal injury.

WARNING! Do not use a high pressure hose to inflate your tires.
X. CARE AND MAINTENANCE

- Use a rubber conditioner on the tire sidewalls to help preserve them.

**WARNING!** Never use a rubber conditioner on the tread area of the tires; doing so may make the tires slippery and cause your Jet to skid. Check for wear.

- The body shroud has been sprayed with a clear sealant coating. You can apply a light coat of car wax to help it retain its high-gloss appearance.
- Check all electrical connections. Make sure they are tight and are not corroded. Batteries must sit flat within the battery well, with the battery terminals facing inward, towards each other. Refer to the frame decal for the correct wiring layout.
- All wheel bearings are prelubricated and sealed. They require no subsequent lubrication.

**Daily Checks**

- With the controller turned off, check the joystick. Make sure it is not bent or damaged and that it returns to center when you release it. Check the rubber boot around the base of the joystick for damage. Visually inspect the boot. Do not handle or try to repair it. See your authorized Pride provider if there is a problem.
- Visually inspect the controller harnesses. Make sure that they are not frayed or cut or have any wires exposed. See your authorized Pride provider if there is a problem with any of these harnesses.

**Weekly Checks**

- Disconnect and inspect the controller and the charger harnesses from the electronics tray. Look for corrosion. Contact your authorized Pride provider if necessary.
- Ensure that all parts of the controller system are securely fastened to your Jet. Do not overtighten any screws.
- Calibrate the joystick if a noticeable difference in performance is detected or if the joystick does not operate properly. To calibrate the joystick, power off the unit, place the joystick in the center position, and power the unit back on. If a problem still exists with your joystick’s performance, contact your authorized Pride provider.
- Check the brakes. This test should be carried out on a level surface with at least three feet of clearance around your Jet.

**To check the brakes:**

1. Turn on the controller and turn down the speed.
2. After one second, check the battery gauge. Make sure that it remains on.
3. Slowly push the joystick forward until you hear the electric brakes click. Immediately release the joystick. You must be able to hear each electric brake operating within a few seconds of joystick movement. Repeat this test three times, pushing the joystick backwards, then left, and then right.

**Monthly Checks**

- Check that the anti-tip wheels are not rubbing the ground when you are operating the Jet. Adjust them as necessary. See VI. “Comfort Adjustments.”
- Check for extreme wear on the anti-tip wheels. Replace them as necessary.
- Check for drive tire wear. See your authorized Pride provider for repair.
- Check the rear casters for wear. Replace them as necessary.
- Check the rear forks for damage or fluttering which indicates that they may need to be adjusted or have the bearings replaced. See your authorized Pride provider for repair.
- Keep your Jet clean and free of foreign material, such as mud, dirt, hair, food, drink, etc.
X. CARE AND MAINTENANCE

Yearly Checks
Take your Jet to your authorized Pride provider for yearly maintenance. This helps ensure that your Jet is functioning properly and helps prevent future complications.

Storage
Your power chair should be stored in a dry place, free from temperature extremes. When storing, disconnect the batteries from the Jet. See IX. “Batteries and Charging.”

![WARNING!]
WARNING! If you fail to store the unit under the above conditions, the frame can rust, and the electronics can be damaged.

Cleaning Instructions

![CAUTION!]
CAUTION! Never hose off your Jet or place it in direct contact with water. Your Jet has a clear-coated, ABS plastic body shroud that allows it to be easily wiped clean with a damp cloth.

CAUTION! Never use any chemicals to clean a vinyl seat, as they may cause the seat to become slippery or dry out and crack. Use soapy water and dry the seat thoroughly.

TIRE/WHEEL REPLACEMENT
If you have pneumatic tires and you have a flat tire, you may replace the tube. If your chair is equipped with a solid tire insert, then you must replace the whole wheel assembly. Replacement tires, tubes, and wheel assemblies are readily available through your authorized Pride provider.

![WARNING!]
WARNING! To avoid possible injury, be sure that the controller’s power is turned off and the power chair is not in freewheel mode before performing this procedure.

WARNING! Completely deflate the tire before attempting repair.

Follow these easy steps for a quick and safe repair for both solid and pneumatic tires:
1. Turn off the power to the controller.
2. Set the power chair up on blocks.
3. If you are changing a pneumatic tire, completely deflate it before removing the wheel.
4. Use a socket wrench to remove the drive wheel nut from the center hub of the wheel. See figure 28.
5. Pull the wheel off the axle.
6. Remove the old tube from the pneumatic tire and replace it with a new tube.
7. Slide the wheel back onto the shaft.
8. Reinstall the drive wheel bolt into the center hub and tighten.
9. Inflate the pneumatic tire to 30 - 35 psi.
Battery Replacement
A diagram is printed on a decal located on the Jet frame near the battery tray.

WARNING! Pride power chair batteries are heavy. Refer to the specifications table for specific weights. If you are unable to lift that much weight, be sure to get help. Lifting beyond your capacity can result in personal injury.

To replace the batteries:
1. Turn the power off.
2. Unplug the connectors from the electronics tray.
3. Remove the seat.
4. Remove the shroud.
5. Loosen the wing nuts on the positive battery terminals first.
6. Disconnect the wires from the batteries.
7. Loosen the wing nuts on the negative battery terminals.
8. Disconnect the wires from the batteries.
9. Replace the batteries.
10. Install the batteries into your Jet with the terminal sides of the batteries facing inward, toward each other.
11. Connect the wire marked (+) to the closest positive (red) battery terminal.
12. Connect the wire marked (-) to the closest negative (black) battery terminal on the other battery.

CAUTION! Make sure you tighten the fasteners so that they are secure.

13. Connect one circuit breaker harness to the empty positive terminal of one battery, and connect the other circuit breaker harness to the empty negative terminal of the other battery.

The electric motors that power your Jet use carbon brushes. These brushes may become susceptible to wear over a long period of time. The motor brushes are the two contacts located inside the motor assembly that supply power to the motor. They are designed to provide several thousand hours of operation. However, if the brushes become dirty with carbon deposits or wear out, the motor will run poorly or not at all.

CAUTION! If inspection determines excessive wear on the brushes, they must be replaced or motor damage will result. Failure to maintain the brushes could void the warranty.

To inspect or replace the motor brushes:
1. Remove the seat and body shroud. See VII. “Disassembly.”
2. Unscrew the motor brush caps. See figure 29.
3. Remove the brushes.
4. Inspect for wear.
5. Replace brushes, if necessary. Contact your authorized Pride provider for replacement brushes.
X. CARE AND MAINTENANCE

When to See Your Authorized Pride Provider for Service
The following symptoms could indicate a serious problem with your Jet. If necessary, contact your authorized Pride provider. When calling, have the model number, serial number, nature of the problem, and the trouble code if available.

- Motor noise
- Frayed harnesses
- Cracked or broken connectors
- Uneven wear on any of the tires
- Jerky motion
- Pulling to one side
- Bent or broken wheel assemblies
- Does not power up
- Powers up, but does not move

Corrective Maintenance
If the battery indicator gauge does not light up when you turn on the power:

- Check the harness connections. Make sure they are tight.
- Check the circuit breaker. Reset it if necessary.
- Check the battery connections.

If the above conditions prove normal, you can load test the batteries with a battery load tester. These testers are available at automotive parts stores. Disconnect both batteries before load testing and follow the directions that come with the load tester. If either one of the batteries fails the load test, replace both of them. If your Jet still does not power up, contact your authorized Pride provider.
XI. OPTIONAL ACCESSORIES

OPTIONAL ACCESSORIES
The following accessories are available from your authorized Pride provider.

Oxygen Tank Holder
The removable oxygen tank holder is mounted to the back of the seat by means of the accessory bracket.

Cane and Crutch Holder
The removable cane and crutch holder is mounted to the back of the seat by means of the accessory bracket.

Walker Holder
The removable walker holder is mounted to the back of the seat by means of the accessory bracket. It can hold a standard size walker.

Rear Basket
The rear basket is mounted to the accessory bracket. It has a handle that you can use when you remove the basket from your Jet.

Cup Holder
The cup holder is mounted to the armrest.
XII. WARRANTY

FIVE-YEAR LIMITED FRAME WARRANTY
There will be a five year limited frame warranty on Pride workmanship.

One-year limited Warranty
For one year from the date of purchase, Pride will repair or replace at our option to the original purchaser free of charge, any of the following parts found upon examination by an authorized representative of Pride to be defective in material and/or workmanship:

- Electronic controllers and joystick assemblies
- Motor/gearbox assembly
- Main frame subassemblies (fork, caster beams, metal seat base, metal arms, metal foot plate)
- Plastic components except body
- Rubber components
- Bearings and bushings
- Caster and anti-tip wheels

warranty exceptions
Motor: The commutator of the motor is not warranted if the damage is caused by not replacing the motor brushes after heavy wear to the brushes. Motor brushes are wear items and are not warranted.

Brake: There is a one-year warranty for the electrical function of the brakes. Brake pads are wear items and are not warranted.

Battery: The battery is covered by the battery manufacturer. The battery warranty is not covered by Pride.

Warranty service can be performed by your authorized Pride provider. Do not return faulty parts to Pride without prior consent. All transportation costs and shipping damage incurred while submitting parts for repair or replacement are the responsibility of the original purchaser.

Warranty Exclusions
- ABS plastic body shrouds and footrest covers are wear items and not warranted.
- Batteries (battery manufacturer provides a six-month limited warranty)
- Tires and tubes
- Upholstery and seating
- Repairs and/or modifications made to any part without specific prior written consent from Pride
- Circumstances beyond the control of Pride
- Labor, service calls, shipping, and other charges incurred for repair of the product unless specifically authorized by Pride

Damage caused by:
- Battery fluid spillage or leakage
- Abuse, misuse, accident, or negligence
- Improper operation, maintenance, or storage
- Commercial use, or use other than normal

There is no other express warranty.

Implied warranties, including those of merchantability and fitness for a particular purpose, are limited to one year from the date of purchase and to the extent permitted by law. Any and all implied warranties are excluded. This is the exclusive remedy. Liabilities for consequential damages under any and all warranties are excluded.

Some states do not allow limitations on how long an implied warranty lasts or do not allow the exclusion of limitation of incidental or consequential damages. The above limitation or exclusion may not apply to you.

This warranty gives you specific rights, and you may also have other rights which vary from state to state.

Please fill out and return the product registration card to Pride. This will aid Pride in providing the best possible technical and customer service.
Thank you for making the Jet 1 HD your choice in power chairs.

We have thoroughly inspected your Jet 1 HD. The following checkmarks indicate that it has been driven and inspected.
