Owner’s Manual

The Ultimate In Style & Performance®

Exeter, PA
St. Catharines, ON 1-800-800-8586
www.pridemobility.com
SAFETY GUIDELINES

The symbols below are used throughout this owner’s manual and on the scooter to identify warnings and important information. It is very important for you to read them and understand them completely.

**WARNING!** Indicates a potentially hazardous condition/situation that can cause personal injury, equipment and/or property damage. (Black symbol on yellow triangle with black border).

**MANDATORY!** These actions should be performed as specified. Failure to perform mandatory actions can cause injury to personnel and/or damage to equipment (white symbol on blue dot).

**PROHIBITED!** These actions are prohibited; do not perform at any time or in any situation. Performing a prohibited action can cause personal injury and/or equipment damage (black symbol with red circle and red slash).

Please fill out the following information for quick reference:

Pride Provider:___________________________________ Purchase Date:___________________________________
Address:_____________________________________________________________________________________
Phone Number:________________________________________________________________________________
Serial Number:________________________________________________________________________________

**NOTE:** This owner’s manual is compiled from the latest specifications and product information available at the time of publication. We reserve the right to make changes as they become necessary. Any changes to our products may cause slight variations between the illustrations and explanations in this manual and the product you have purchased.

SAFETY

WELCOME to Pride Mobility Products Corporation (Pride). The product you have purchased combines state of the art components with safety, comfort and styling in mind. We are confident the design features will provide you with the conveniences you expect during your daily activities. Understanding how to safely operate and care for this product should bring you years of trouble free operations and service.

Read and follow all instructions, warnings, and notes in this manual and all other accompanying literature before attempting to operate this product for the first time. In addition, your safety depends upon you, as well as your provider, caretaker, or healthcare professional in using good judgement.

If there is any information in this manual which you do not understand, or if you require additional assistance for setup or operation, please contact your authorized Pride Provider. Failure to follow the instructions, warnings, and notes in this manual and those located on your Pride product can result in personal injury or product damage and will void Pride’s product warranty.

PURCHASER’S AGREEMENT

By accepting delivery of this product, you promise that you will not change, alter or modify this product or remove or render inoperable or unsafe any guards, shields, or other safety features of this product; fail, refuse or neglect to install any retrofit kits from time to time provided by Pride to enhance or preserve the safe use of this product.

INFORMATION EXCHANGE

We want to hear your questions, comments, and suggestions about this manual. We would also like to hear about the safety and reliability of your new scooter, and about the service you received from your authorized Pride Provider. Please notify us of any change of address, so we can keep you apprised of important information about safety, new products, and new options that can increase your ability to use and enjoy your scooter. Please feel free to contact us at the address below:

Pride Mobility Products Corporation
Attn: Customer Care Department
182 Susquehanna Ave.
Exeter, PA 18643-2694

NOTE: If you ever lose or misplace your product registration card or your copy of this manual, contact us and we will be glad to send you a new one immediately.

PRIDE OWNERS CLUB

As an owner of a Pride product, you are encouraged to enroll in the Pride Owners Club. Complete and return your enclosed product registration card or visit Pride's web site at www.pridemobility.com.

From our home page, select “Owners Club” to enter a page dedicated to current and potential Pride product owners. You will gain access to interviews, stories, recreation ideas, daily living tips, product and funding information, and interactive message boards. These message boards invite you to communicate with other Pride customers as well as Pride representatives who are available to assist you with any questions or concerns.
II. SAFETY

PRODUCT SAFETY SYMBOLS
The symbols below are used on the scooter to identify warnings, mandatory actions, and prohibited actions. It is very important for you to read and understand them completely.

Read and follow the information in the owner’s manual.

Maximum seating weight.

Pinch/Crush points created during assembly.

Do not use a cell phone, walkie/talkie, laptop, or other radio transmitter while operating.

Locked and in drive mode.

Place unit on level ground and stand behind or to one side when changing from drive mode to freewheel mode or freewheel mode to drive mode.

Unlocked and in freewheel mode.

Front-to-rear plug orientation.
II. SAFETY

Corrosive chemicals contained in battery. Use only AGM or Gel-Cell batteries to reduce the risk of leakage or explosive conditions.

Explosive conditions.

Use only AGM or Gel-Cell batteries.

Contact with tools can cause electrical shock.

Do not remove anti-tip wheels.

Avoid exposure to rain, snow, ice, salt, or standing water whenever possible. Maintain and store in a clean and dry condition.

Removal of grounding prong can create electrical hazard. If necessary, properly install an approved 3-pronged adapter to an electrical outlet having 2-pronged plug access. Failure to heed could result in personal injury and/or property damage.

Prevent personal injury and equipment damage. Do not connect an extension cord to the AC/DC converter or the battery charger.
II. SAFETY

GENERAL

MANDATORY! Do not operate your new scooter for the first time without completely reading and understanding this owner's manual.

Your scooter is a state-of-the-art life-enhancement device designed to increase mobility. Pride provides an extensive variety of products to best fit the individual needs of the scooter user. Please be aware that the final selection and purchasing decision regarding the type of scooter to be used is the responsibility of the scooter user who is capable of making such a decision and his/her healthcare professional (i.e., medical doctor, physical therapist, etc.).

There are certain situations, including some medical conditions, where the scooter user will need to practice operating the scooter in the presence of a trained attendant. A trained attendant can be defined as a family member or care professional specially trained in assisting a scooter user in various daily living activities.

As you begin using your scooter during daily activities, you will probably encounter situations in which you will need some practice. Simply take your time and you will soon be in full and confident control as you maneuver through doorways, on and off of elevators, up and down ramps, and over moderate terrain.

Below are some precautions, tips, and other safety considerations that will help the user become accustomed to operating the scooter safely.

MODIFICATIONS
Pride has designed and engineered your scooter to provide maximum mobility and utility. However, under no circumstances should you modify, add, remove, or disable any feature, part, or function of your scooter.

WARNING! Do not modify your scooter in any way not authorized by Pride. Unauthorized modifications may result in personal injury and/or damage to your scooter.

REMOVABLE PARTS

WARNING! Do not attempt to lift or move your scooter by any of its removable parts. Personal injury and damage to the scooter may result.
II. SAFETY

PRE-RIDE SAFETY CHECK
Get to know the feel of your scooter and its capabilities. Pride recommends that you perform a safety check before each use to make sure your scooter operates smoothly and safely. For details on how to perform these necessary inspections, see XI. “Care and Maintenance.”

Perform the following inspections prior to using your scooter:
- Check for proper tire inflation (if equipped with pneumatic tires).
- Check all electrical connections. Make sure they are tight and not corroded.
- Check all harness connections. Make sure they are secured properly.
- Check the brakes.
- Check battery charge.

If you discover a problem, contact your authorized Pride Provider for assistance.

TIRE INFLATION
If your scooter is equipped with pneumatic tires, you should check or have the air pressure checked at least once a week. Proper inflation pressures will prolong the life of your tires and help ensure the smooth operation of your scooter.

WARNING! It is critically important that 30-35 psi tire pressure be maintained in pneumatic tires at all times. Do not underinfl ate or overinfl ate your tires. Low pressure may result in loss of control, and overinflated tires may burst. Failure to maintain 30-35 psi tire pressure in pneumatic tires at all times may result in tire and/or wheel failure, causing serious personal injury and/or damage to your scooter.

WARNING! Inflate your scooter tires from a regulated air source with an available pressure gauge. Inflating your tires from an unregulated air source could overinfl ate them, resulting in a burst tire and/or personal injury.

WEIGHT LIMITATIONS
Your scooter is rated for a maximum weight capacity. Refer to the specifications table for information.

WARNING! Exceeding the weight capacity voids your warranty and may result in personal injury and damage to your scooter. Pride will not be held responsible for injuries and/or property damage resulting from failure to observe weight limitations.

WARNING! Do not carry passengers on your scooter. Carrying passengers may result in personal injury and/or property damage.

INCLINE INFORMATION
More and more buildings have ramps with specified degrees of inclination, designed for easy and safe access. Some ramps may have turning switchbacks (180-degree turns) that require you to have good cornering skills on your scooter.
- Proceed with extreme caution as you approach the downgrade of a ramp or other incline.
- Take wide swings with your scooter around any tight corners. If you do that, the scooter’s rear wheels will follow a wide arc, not cut the corner short, and not bump into or get hung up on any railing corners.
- When driving down a ramp, keep the scooter’s speed adjustment set to the slowest speed setting to ensure a safely controlled descent.
- Avoid sudden stops and starts.
II. SAFETY

When climbing an incline, try to keep your scooter moving. If you must stop, start up again slowly, and then accelerate cautiously. When driving down an incline, do so by setting the speed adjustment dial to the slowest setting and driving in the forward direction only. If your scooter starts to move down the incline faster than you anticipated or desired, allow it to come to a complete stop by releasing the throttle control lever. Then push the throttle control lever forward slightly to ensure a safely controlled descent.

WARNING! When climbing an incline, do not zigzag or drive at an angle up the face of the incline. Drive your scooter straight up the incline. This greatly reduces the possibility of a tip or a fall. Always exercise extreme caution when negotiating an incline.

WARNING! Do not drive your scooter across the side of an incline or diagonally up or down an incline; do not stop, if possible, while driving up or down an incline.

WARNING! You should not travel up or down a potentially hazardous incline (i.e., areas covered with snow, ice, cut grass, or wet leaves).

WARNING! When on any sort of an incline or decline, never place the scooter in freewheel mode while seated on it or standing next to it.

WARNING! Even though your scooter is capable of climbing slopes greater than those illustrated in figure 1 do not, under any circumstances, exceed the incline guidelines or any other specifications presented in this manual. Doing so could cause instability in your scooter, resulting in personal injury and/or damage to your scooter.

Handicap public access ramps are not subject to government regulation in all countries, and therefore do not necessarily share the same standard percent of slope. Other inclines may be natural or, if man-made, not designed specifically for scooters. Figure 1 illustrates your scooter’s stability and its ability to climb grades under various weight loads and under controlled testing conditions.

These tests were conducted with the scooter’s seat in the highest position and adjusted rearward on the seat base to its farthest rearward position. Use this information as a guideline. Your scooter’s ability to travel up inclines is affected by your weight, your scooter’s speed, your angle of approach to the incline, and your scooter setup.

**Figure 1. Maximum Recommended Incline Angles**

<table>
<thead>
<tr>
<th>Weight</th>
<th>Angle</th>
</tr>
</thead>
<tbody>
<tr>
<td>150 lbs</td>
<td>9°/18.8%</td>
</tr>
<tr>
<td>200 lbs</td>
<td>9°/18.8%</td>
</tr>
<tr>
<td>250 lbs</td>
<td>8°/14.1%</td>
</tr>
<tr>
<td>300 lbs</td>
<td>6°/10.5%</td>
</tr>
</tbody>
</table>

WARNING! Any attempt to climb or descend a slope steeper than what is shown in figure 1 may put your scooter in an unstable position and cause it to tip, resulting in personal injury.
II. SAFETY

When you approach an incline, it is best to lean forward. See figures 2 and 2A. This shifts the center of gravity of you and your scooter toward the front of the scooter for improved stability.

NOTE: When negotiating ramps, if the throttle control lever is released while moving forward, the powered scooter may "rollback" approximately 1 foot before the brake engages. If the throttle control lever is released while moving in reverse, the powered scooter may "rollback" approximately 3 feet before the brake engages.

![Figure 2. Normal Driving Position](image1)

![Figure 2A. Increased Stability Driving Position](image2)

CORNERING INFORMATION
Excessively high cornering speeds can create the possibility of tipping. Factors which affect the possibility of tipping include, but are not limited to, cornering speed, steering angle (how sharply you are turning), uneven road surfaces, inclined road surfaces, riding from an area of low traction to an area of high traction (such as passing from a grassy area to a paved area – especially at high speed while turning), and abrupt directional changes. High cornering speeds are not recommended. If you feel that you may tip over in a corner, reduce your speed and steering angle (i.e., lessen the sharpness of the turn) to prevent your scooter from tipping.

![WARNING! When cornering sharply, reduce your speed. When using your scooter at higher speeds, do not corner sharply. This greatly reduces the possibility of a tip or fall. To avoid personal injury or property damage, always exercise common sense when cornering.](image3)

BRAKING INFORMATION
Your scooter is equipped with these powerful brake systems:
- Regenerative: Uses electricity to rapidly slow the vehicle when the throttle control lever returns to the center/stop position.
- Disc Park Brake: Activates mechanically after regenerative braking slows the vehicle to near stop, or when power is removed from the system for any reason.
II. SAFETY

OUTDOOR DRIVING SURFACES
Your scooter is designed to provide optimum stability under normal driving conditions—dry, level surfaces composed of concrete, blacktop, or asphalt. However, Pride recognizes that there will be times when you will encounter other surface types. For this reason, your scooter is designed to perform admirably on packed soil, grass, and gravel. Feel free to use your scooter safely on lawns and in park areas.
- Reduce your scooter’s speed when driving on uneven terrain and/or soft surfaces.
- Avoid tall grass that can become tangled in the running gear.
- Avoid loosely packed gravel and sand.
- If you feel unsure about a driving surface, avoid that surface.

PUBLIC STREETS AND ROADWAYS

WARNING! You should not operate your scooter on public streets and roadways. Be aware that it may be difficult for traffic to see you when you are seated on your scooter. Obey all local pedestrian traffic rules. Wait until your path is clear of traffic, and then proceed with extreme caution.

STATIONARY OBSTACLES (STEPS, CURBS, etc.)

WARNING! Do not drive near raised surfaces, unprotected ledges, and/or drop-offs (curbs, porches, stairs, etc.).

WARNING! Do not attempt to have your scooter climb or descend an obstacle that is inordinately high. Serious personal injury and/or damage may result.

WARNING! Do not attempt to have your scooter proceed rearward down any step, curb, or other obstacle. This may cause the scooter to tip and cause personal injury.

WARNING! Be sure your scooter is traveling perpendicular to any curb you may be required to ascend or descend. See figures 3 and 3A.

WARNING! Do not attempt to negotiate a curb that has a height greater than 2 in.
II. SAFETY

INLEMENT WEATHER PRECAUTIONS
Exposure of your scooter to inclement weather conditions should be avoided whenever possible. If suddenly caught up in rain, snow, severe cold or heat while operating your scooter proceed to shelter at the earliest opportunit.y. Thoroughly dry your scooter before storing, charging, or operating your scooter.

WARNING! Operating in rain, snow, salt, mist/spray conditions, and on icy/slippery surfaces can cause personal injury and/or damage to the scooter and electrical system. Maintain and store your scooter in a dry and clean condition.

FREEWHEEL MODE
Your scoot er is equipped with a manual freewheel lever that, when pulled back, allows the scooter to be pushed. For more information about how to place your scooter into and out of freewheel mode, see V. “Your Scooter.”

WARNING! When your scooter is in freewheel mode, the braking system is disengaged.
- Disengage the drive motor only on a level surface.
- Ensure the key is removed from the key switch.
- Stand behind the scooter to engage or disengage freewheel mode. Never sit on a scooter to do this.
- After you have finished pushing your scooter, always return it to the drive mode to lock the brakes.

Failure to heed the above could result in personal injury and/or damage to your scooter.

An added feature built into your scooter is “push-too-fast” protection which safeguards the scooter against gaining excessive speed while in freewheel mode.

“Push-too-fast” operates differently depending on which of two conditions exists:
- If the key is switched “off” while in freewheel mode, the scooter’s controller activates regenerative braking when the scooter is pushed faster than a maximum threshold which has been preprogrammed. In this case, the controller is acting as a speed governor.
- If the key is switched “on” while in freewheel mode, you will encounter considerable resistance at any speed. This prevents the scooter from gaining unwanted momentum should the manual freewheel lever inadvertently be released while driving the scooter.

STAIRS AND ESCALATORS
Scooters are not designed to travel up or down stairs or escalators. Always use an elevator.

WARNING! Do not use your scooter to negotiate steps or escalators. You may cause injury to yourself and to others and/or damage your scooter.

DOORS
- Determine if the door opens toward or away from you.
- Use your hand to turn the knob or push the handle or push-bar.
- Drive your scooter gently and slowly forward to push the door open. Or drive your scooter gently and slowly rearward to pull the door open.
II. SAFETY

ELEVATORS
Modern elevators have a door edge safety mechanism that, when pushed, reopens the door(s).
- If you are in the doorway of an elevator when the door(s) begin to close, push on the rubber door edge or allow the rubber door edge to contact the scooter and the door will reopen.
- Use care that pocketbooks, packages, or scooter accessories do not become caught in elevator doors.

LIFT/ELEVATION PRODUCTS
If you will be traveling with your scooter, you may find it necessary to use a lift/elevation product to aid in transportation. Pride recommends that you closely review the instructions, specifications, and safety information set forth by the manufacturer of the lift/elevation product before using that product.

⚠️ WARNING! Never sit on your scooter when it is being used in connection with any type of lift/elevation product. Your scooter was not designed for such use, and any damage or injury incurred from such use is not the responsibility of Pride.

BATTERIES
In addition to following the warnings below, be sure to comply with all other battery handling information.

⚠️ WARNING! Scooter batteries are heavy (refer to specifications table). Lifting weight beyond your capacity could result in personal injury. If necessary, get someone physically able to lift the scooter batteries for you.

⚠️ WARNING! Battery posts, terminals, and related accessories contain lead and lead compounds. Wash hands after handling.

⚠️ WARNING! Always protect the batteries from freezing and never charge a frozen battery. Charging a frozen battery may result in personal injury and/or damage to the battery.

⚠️ WARNING! RED (+) cables must be connected to positive (+) battery terminals/posts. BLACK (-) cables must be connected to negative (-) battery terminals/posts. Failure to connect your battery cables in the proper manner may result in personal injury and/or damage to your scooter. REPLACE cables immediately if damaged.

BATTERY DISPOSAL AND RECYCLING
If you encounter a damaged or cracked battery, immediately enclose it in a plastic bag and call your authorized Pride Provider for instructions on disposal. Your authorized Pride Provider will also have the necessary information on battery recycling, which is our recommended course of action.
II. SAFETY

MOTOR VEHICLE TRANSPORT
Currently, there are no standards approved for tie-down systems in a moving vehicle of any type to transport a person while seated in a scooter.

Although your scooter may be equipped with a positioning belt, this belt is not designed to provide proper restraint during motor vehicle transport. Anyone traveling in a motor vehicle should be properly secured in the motor vehicle seat with safety belts fastened securely.

WARNING! Do not sit on your scooter while it is in a moving vehicle. Personal injury and/or property damage may result.

WARNING! Always be sure your scooter and its batteries are properly secured when it is being transported. Failure to do so may result in personal injury and/or damage to your scooter.

PREVENTING UNINTENDED MOVEMENT

WARNING! If you anticipate being seated in a stationary position for an extended period of time, turn off the power. This will prevent unexpected motion from inadvertent throttle control lever contact. Failure to do so may result in personal injury.

GETTING ONTO AND OFF OF YOUR SCOOTER
Getting onto and off of your scooter requires a good sense of balance. Please observe the following safety tips when getting onto and off of your scooter:

- Ensure that your scooter is not in freewheel mode. See V. “Your Scooter.”
- Make certain that the seat is locked into place and the key is removed from the key switch.
- Flip up the seat armrests to make getting onto and off of the scooter easier.

WARNING! Position yourself as far back as possible in the scooter seat to prevent the scooter from tipping and causing injury.

WARNING! Avoid using your armrests for weight bearing purposes. Such use may cause the scooter to tip and cause personal injury.

WARNING! Avoid putting all of your weight on the floorboard. Such use may cause the scooter to tip and cause personal injury.

REACHING AND BENDING
Avoid reaching or bending while driving your scooter. When reaching, bending, or leaning while seated on your scooter, it is important to maintain a stable center of gravity and keep the scooter from tipping. Pride recommends that the scooter user determine his/her personal limitations and practice bending and reaching in the presence of a qualified healthcare professional.

WARNING! Do not bend, lean, or reach for objects if you have to pick them up from the floor by reaching down between your knees. Movements such as these may change your center of gravity and the weight distribution of the scooter and cause your scooter to tip, possibly resulting in personal injury. Keep your hands away from the tires when driving.

WARNING! Prevent personal injury! Keep your hands away from the tires when driving. Be aware that loose fitting clothing can become caught in drive tires.
II. SAFETY

POSITIONING BELTS
Your authorized Pride Provider, therapist(s), and other healthcare professionals are responsible for determining your requirement for a positioning belt in order to operate your scooter safely.

WARNING! If you require a positioning belt to safely operate your scooter, make sure it is fastened securely. Serious personal injury may result if you fall from the scooter.

PRESCRIPTION DRUGS/PHYSICAL LIMITATIONS
The scooter user must exercise care and common sense when operating his/her scooter. This includes awareness of safety issues when taking prescribed or over-the-counter drugs or when the user has specific physical limitations.

WARNING! Consult your physician if you are taking prescribed or over-the-counter medication or if you have certain physical limitations. Some medications and limitations may impair your ability to operate your scooter in a safe manner.

ALCOHOL
The scooter user must exercise care and common sense when operating his/her scooter. This includes awareness of safety issues while under the influence of alcohol.

WARNING! Do not operate your scooter while you are under the influence of alcohol, as this may impair your ability to drive safely.
III. EMI/RFI

EMI/RFI WARNINGS
Laboratory tests performed by the Food and Drug Administration (FDA) have shown that radio waves can cause unintended motion of electric mobility vehicles. Radio waves are a form of electromagnetic energy (EM). When electromagnetic energy adversely affects the operation of an electrical device, that adverse effect is called Electromagnetic Interference (EMI) or Radio Frequency Interference (RFI).

EMI/RFI FREQUENTLY ASKED QUESTIONS (FAQS)
The following FAQs summarize what you should know about EMI/RFI. Use this information to minimize the risk that EMI/RFI will adversely affect your mobility vehicle.

Where do radio waves come from?
Radio waves are emitted from the antennas of cellular phones, mobile two-way radios (such as walkie-talkies and CBs), radio stations, TV stations, amateur radio (HAM) transmitters, wireless computer links, microwave sources, and paging transmitters. Radio waves are a form of electromagnetic energy (EM). EM is more intense closer to transmitting antennas, which are sources of emission. The greater the transmission strength, the greater the concern to electric mobility vehicle users.

If EMI/RFI affects my mobility vehicle, what kind of motion should I expect?
This is difficult to predict. The answer would depend on a number of factors:
- The strength of the radio waves.
- The construction of your particular mobility vehicle.
- The location of your mobility vehicle (whether it is on the level ground or on an incline).
- Whether or not your mobility vehicle is in motion.

The motion of any electric mobility vehicle affected by EMI/RFI can be erratic. The mobility vehicle may come to a sudden stop or move in an uncontrolled manner. Also, it is possible for EMI/RFI to release the brakes of an electric mobility vehicle. Some intense EMI/RFI can even damage the control system components of an electric mobility vehicle.

Is there any way to know for certain whether or not radio waves are the cause of any unintended mobility vehicle motion?
Unfortunately, EMI/RFI may be difficult to recognize, because the signals from radio sources are invisible and may be intermittent. However, the FDA recommends that you report all incidents of unintended motion or unintended brake release of your mobility vehicle to its manufacturer and, if possible, determine whether or not there was a radio wave source nearby at the time of the incident.

One precaution you can take against unintended motion of your mobility vehicle is to make certain that you or someone else is not the cause of the unintended motion.
- Turn off your mobility vehicle by removing the key from the key switch when you are getting onto or off of your mobility vehicle.
- Never leave the key in the key switch of an unattended mobility vehicle.
- By following these steps, you greatly reduce the risk of you or anyone else inadvertently bumping the throttle control levers and causing the mobility vehicle to move unintentionally.

Has anyone been injured by the erratic, unintended motion of an electric mobility vehicle?
The FDA has reports of injuries that resulted from uncontrolled motion of electric mobility vehicles, but it is not clear just how many of those injuries were actually caused by EMI/RFI.
III. EMI/RFI

Are all electric mobility vehicles susceptible to EMI/RFI?
Each make and model of electric mobility vehicle differs in its ability to resist EMI/RFI. Every mobility vehicle has a particular level of resistance to EMI/RFI. This resistance is measured in volts per meter (V/m). A higher resistance level offers greater protection against EMI/RFI. In other words, an electric mobility vehicle with a high resistance level is less likely to be affected by a strong radio source than is an electric mobility vehicle with a low resistance level.

What is the FDA doing about the problem?
The FDA has written to electric mobility vehicle manufacturers and requested that those manufacturers test their new mobility vehicle models to be certain that they provide a reasonable degree of resistance against EMI/RFI. The FDA has stated that all newly manufactured electric mobility vehicle models should have a resistance level of at least 20 V/m. This level of resistance provides a reasonable degree of protection against the common sources of EMI/RFI.

The FDA has also requested or recommended that:
- Electric mobility vehicle manufacturers clearly label new products with their resistance level or state that the resistance level is not known.
- The labeling or informational material supplied with new electric mobility vehicles must explain what the resistance level means and warn users about the possibility of EMI/RFI and how to avoid it.
- Electric mobility vehicle manufacturers undertake an educational program to inform electric mobility vehicle users and their caregivers about the problems associated with EMI/RFI and about the actions they can take to minimize the risk of EMI/RFI.
- While there is no exact way to tell if your mobility vehicle is totally safe, an immunity level of 20 V/m is generally achievable and useful. This product has been tested and passed at an immunity level of 20 V/m.

What can I do to find out if my mobility vehicle is likely to be affected by EMI/RFI?
If you have had your mobility vehicle for some time and have not experienced any unintended motion, it is not likely that you will have a problem in the future. However, it is always possible that EMI/RFI problems could arise if you are close to a source of radio waves. Therefore, it is very important for you to be alert to this possibility. The mobility vehicle meets or exceeds a resistance level of at least 20 V/m.

What can I do to reduce the risk of my mobility vehicle being affected by EMI/RFI?
Here are some precautions you can take:
- Do not turn on or use hand-held personal communications devices, such as citizens band (CB) radios and cellular phones, while your mobility vehicle is turned on.
- Be aware of nearby radio wave transmitters, such as radio or TV stations and hand-held or mobile two-way radios. Try not to operate your mobility vehicle too close to those transmitters. For example, if you are on an electric mobility vehicle with a resistance level of at least 20 V/m, you should remain at least three feet from a hand-held two-way radio and at least ten feet from a mobile two-way radio.
- Be aware that adding accessories and/or components, or modifying your mobility vehicle in any way, may change its EMI/RFI resistance level and may make it more susceptible to interference from radio wave sources.

What should I do if my mobility vehicle moves unexpectedly?
If unintended motion or unintended brake release occurs, turn off your mobility vehicle (by removing the key) as soon as it is safe to do so.

If my mobility vehicle moves unintentionally, where should I report the incident?
Call Pride Customer Care at 1-800-424-8205 to report the incident.

V. YOUR SCOOTER

TILLER CONSOLE
The tiller console houses all controls needed to drive your scooter, including the speed adjustment dial, key switch, throttle control lever, battery condition meter, and horn button. See figure 6.

WARNING! Do not expose the tiller console to moisture. In the event that the tiller console does become exposed to moisture, do not attempt to operate your scooter until the tiller console has dried thoroughly.

Figure 6. Tiller Console

Key Switch
Your scooter may be equipped with either of two key switches.
1. Phono plug style—Insert the key fully into the phono plug jack to power up the scooter; remove the key completely to power down the scooter. Do not leave the key resting halfway in the jack.
2. Key style—Insert the key into the key switch and turn clockwise to power up the scooter; turn the key counterclockwise and remove it from the key switch to power down the scooter. Although the key can be left in the key switch, we recommend removing it to prevent unauthorized use of your scooter.

WARNING! If the key is moved to the “off” position while your scooter is in motion, the electronic brakes will engage and your scooter will come to an abrupt stop!

Throttle Control Lever
This lever allows you to control the forward speed and the reverse speed of your scooter up to the maximum speed you preset with the speed adjustment dial.
- Place your right hand on the right handgrip and your left hand on the left handgrip.
- Use your right thumb to push the right side of the lever to disengage your scooter’s brakes and move forward.
- Release the lever and allow your scooter to come to a complete stop before pushing the other side of the lever to move in reverse.
- When the throttle control lever is completely released, it automatically returns to the center “stop” position and engages your scooter’s brakes.
V. YOUR SCOOTER

Horn Buttons
These buttons activate a warning horn. The scooter must be powered up for the horn to be operational. Do not hesitate to use the warning horn when doing so may prevent accident or injury.

Battery Condition Meter
The battery condition meter on the tiller console indicates the approximate strength of your batteries.

Speed Adjustment Dial
This dial allows you to preselect and limit your scooter’s top speed.

- The image of the tortoise represents the slowest speed setting.
- The image of the hare represents the fastest speed setting.

REAR SECTION
The manual freewheel lever, anti-tip wheels, and the motor/transaxle assembly are located on the rear section of your scooter. See figure 7.

![Figure 7. Rear Section]

Manual Freewheel Lever
Whenever you need or want to push your scooter for short distances, you can put it in freewheel mode.

- The manual freewheel lever is located at the top left of the rear section.
- Push rearward on the manual freewheel lever to disable the drive system and the brake system.
- You may now push your scooter.
- Push the manual freewheel lever forward to reengage the drive and the brake systems; this takes your scooter out of freewheel mode.

WARNING! When your scooter is in freewheel mode, the braking system is disengaged.

- Disengage the drive motor only on a level surface.
- Ensure the key is removed from the key switch.
- Stand behind the scooter to engage or disengage freewheel mode. Never sit on a scooter to do this.
- After you have finished pushing your scooter, always return it to the drive mode to lock the brakes.

Failure to heed the above could result in personal injury and/or damage to your scooter.
V. YOUR SCOOTER

Anti-Tip Wheels
The anti-tip wheels are an integral and important safety feature of your scooter. Do not, under any circumstances, remove the anti-tip wheels from your scooter.

WARNING! Do not remove the anti-tip wheels or modify your scooter in any way that is not authorized by Pride.

Motor/Transaxle Assembly
The motor/transaxle assembly is an electromechanical unit that converts electrical energy from your scooter’s batteries into the controlled mechanical energy that drives the scooter’s wheels.

BATTERY CHARGING COMPONENTS
The batteries, off-board battery charger port, and main circuit breaker (reset button) make up the battery charging components. See figure 8.

Batteries (Not Shown)
The batteries store the electrical energy needed to power the scooter. The scooter is equipped with an easy to remove battery pack located within the battery compartment. To view the battery pack, remove the battery compartment lid.

Off-board Battery Charger Port
The off-board battery charger plugs into your scooter by means of the off-board battery charger port.

Main Circuit Breaker (Reset Button)
When the voltage in your scooter’s batteries becomes low or the scooter is heavily strained because of excessive loads or steep inclines, the main circuit breaker may trip to protect the motor and electronics from damage.

■ The main circuit breaker reset button pops out when the breaker trips.
■ When the breaker trips, the entire electrical system of your scooter shuts down.
■ Allow a minute or two for your scooter’s electronics to “rest.”
■ Push in the reset button to reset the main circuit breaker.
■ If the main circuit breaker trips frequently, you may need to charge your batteries more often. You may also need to have your authorized Pride Provider perform a load test on your scooter’s batteries.
■ If the main circuit breaker trips repeatedly, see your authorized Pride Provider for service.

Figure 8. Battery Charging Components
VI. BATTERIES AND CHARGING

Your scooter requires two long-lasting, 12-volt, deep-cycle batteries that are sealed and maintenance free. They are recharged by an off-board battery charging system.
- Fully charge your scooter’s batteries prior to using it for the first time.
- Keep the batteries fully charged to keep your scooter running smoothly.

READING YOUR BATTERY VOLTAGE
The battery condition meter on the tiller console indicates the approximate strength of your batteries using a color code. Green indicates fully charged batteries, yellow a draining charge, and red indicates that an immediate recharge is necessary. See figure 9. To ensure the highest accuracy, the battery condition meter should be checked while operating your scooter at full speed on a dry, level surface.

CHARGING YOUR BATTERIES

PROHIBITED! Never use an extension cord to plug in your battery charger. Plug the charger directly into a properly wired standard wall outlet.

PROHIBITED! Removal of the grounding prong can create an electrical hazard. If necessary, properly install an approved 3-pronged adapter to an electrical outlet having 2-pronged plug access. Failure to heed could result in personal injury and/or property damage.

WARNING! Ensure that both ends of the charger power cord are clean and dry before plugging the charger power cord into the off-board battery charger port or the wall socket.

Charging the batteries on the scooter:
1. Position your scooter close to a standard wall outlet.
2. Remove the key from the key switch.
3. Make certain that the manual freewheel lever is in the drive position.
4. Plug the 3-pin charger power cord (see figure 10) into the battery charging port. See figure 8.
5. Extend the charger power cord and plug it into the wall outlet.
7. It is recommended that you charge your batteries for 8 to 14 hours.
8. When the batteries are fully charged, unplug the charger power cord from the wall outlet and then from the charger power cord receptacle.
9. Replace the charger power cord receptacle cover.

NOTE: There is a charger inhibit function on your scooter. The scooter will not run and the battery condition meter will not operate while the batteries are charging.
VI. BATTERIES AND CHARGING

CHARGING THE BATTERIES OFF THE SCOOTER

If you prefer to leave your scooter inside a vehicle or in a place where an electrical outlet is not available, you can remove the battery pack from the scooter and charge the batteries using the optional Y-harness.

1. Remove battery pack. See IX. “Disassembly and Assembly.”
2. Place the battery pack near an electrical outlet.
3. Connect the Y-harness to the battery harnesses that extend from the battery pack. See figure 11.
4. Plug the appropriate end of the charger power cord into the mating end of the Y-harness.
5. Plug the off-board charger power cord into an electrical outlet.

Follow these steps to properly break-in your scooter’s new batteries for maximum efficiency and service life.

1. Fully recharge any new battery prior to its initial use.
2. Operate your new scooter in familiar and safe areas. Drive slowly at first, and do not travel too far from your home or familiar surroundings until you have become accustomed to your scooter’s controls.
3. Fully recharge the batteries.
4. Operate your scooter again.
5. Fully recharge the batteries again.
6. After four or five charging cycles, the batteries are able to receive a charge of 100% of their peak performance level and are able to last for an extended period of time.
VI. BATTERIES AND CHARGING

FREQUENTLY ASKED QUESTIONS (FAQS)

How does the charger work?
When your scooter’s battery voltage is low, the charger works harder, sending more electrical current to the batteries to bring up their charge. As the batteries approach a full charge, the charger sends less and less electrical current. When the batteries are fully charged, the current sent from the charger is at nearly zero amperage. Therefore, when the charger is plugged in, it maintains the charge on your scooter’s batteries, but does not overcharge them. We do not recommend that you charge your scooter’s batteries for more than 24 consecutive hours.

What if my scooter’s batteries won’t charge?
- Ensure the red (+) and black (-) battery leads are connected properly to the battery terminals.
- Ensure both ends of the charger power cord are inserted fully.

Can I use a different charger?
For the safest, most efficient, and balanced charging of your scooter’s batteries, we prefer and highly recommend simultaneous charging of both batteries with the off-board battery charger supplied with your scooter.

How often must I charge the batteries?
Two major factors must be considered when deciding how often to charge your scooter’s batteries:
- All day scooter use on a daily basis.
- Infrequent or sporadic scooter use.

With these considerations in mind, you can determine how often and for how long you should charge your scooter’s batteries. We designed the off-board battery charger so that it will not overcharge your scooter’s batteries. However, you may encounter some problems if you do not charge your batteries often enough and if you do not charge them on a regular basis. Following the guidelines below will provide safe and reliable battery operation and charging.
- If you use your scooter daily, charge its batteries as soon as you finish using it for the day. Your scooter will be ready each morning to give you a full day of service. We recommend that you charge your scooter’s batteries for 8 to 14 hours after daily use.
- If you use your scooter once a week or less, charge its batteries at least once a week for 12 to 14 hours at a time.
- Keep your scooter’s batteries fully charged.
- Avoid deeply discharging your scooter’s batteries.

How can I ensure maximum battery life?
Fully charged deep-cycle batteries provide reliable performance and extended battery life. Keep your scooter’s batteries fully charged whenever possible. Batteries that are regularly and deeply discharged, infrequently charged, or stored without a full charge may be permanently damaged, causing unreliable performance and limited service life.

What about public transportation?
If you intend to use public transportation with your scooter, you must contact the transportation provider in advance to determine their specific requirements.
VI. BATTERIES AND CHARGING

How can I get maximum range or distance per charge?
Rarely will you have ideal driving conditions—smooth, flat, hard driving surfaces with no wind or curves. Often, you will face hills, pavement cracks, uneven and loosely packed surfaces, curves, and wind, all of which affect the distance or running time per battery charge. Below are a few suggestions for obtaining the maximum range per battery charge.
- Always fully charge your scooter’s batteries prior to daily use.
- Maintain 30-35 psi in each tire.
- Plan your route ahead to avoid as many hills, cracked, broken, or soft surfaces as possible.
- Limit your baggage weight to essential items.
- Try to maintain an even speed while your scooter is in motion.
- Avoid stop-and-go driving.

What type and size of battery should I use?
We recommend deep-cycle batteries that are sealed and maintenance free. Both AGM and Gel-Cell are deep-cycle batteries that are similar in performance. Do not use wet-cell batteries, which have removable caps.

NOTE: Sealed batteries are not serviceable. Do not remove the caps.

⚠️ WARNING! Corrosive chemicals are contained in batteries. Use only AGM or Gel-Cell batteries to reduce the risk of leakage or explosive conditions.

Why do my new batteries seem weak?
Deep-cycle batteries employ a different chemical technology than that used in car batteries, nickel-cadmium batteries (nicads), or in other common battery types. Deep-cycle batteries are specifically designed to provide power, drain down their charge, and then accept a relatively quick recharge.

We work closely with our battery manufacturer to provide batteries that best suit your scooter’s specific electrical demands. Fresh batteries arrive daily at Pride and are shipped fully charged to our customers. During shipping, the batteries may encounter temperature extremes that may influence their initial performance. Heat diminishes the charge on the battery; cold slows the available power and extends the time needed to recharge the battery.

It may take a few days for the temperature of your scooter’s batteries to stabilize and adjust to their new room or ambient temperature.

It takes a few charging cycles (partial draining followed by full recharging) to establish the critical chemical balance that is essential to a deep-cycle battery’s peak performance and long life.
VI. BATTERIES AND CHARGING

BATTERY REPLACEMENT

**WARNING!** Battery posts, terminals, and related accessories contain lead and lead compounds. Wash hands after handling.

**Battery Removal**
1. Remove the battery compartment lid. See figure 12.
2. Disconnect the battery harnesses. See figure 13.
3. Remove the battery pack from the scooter. See figure 14.
4. Unzip the battery pack and remove the battery or batteries.
5. Disconnect the red (+) positive and black (-) negative battery leads from the battery terminals by pulling them gently from the battery terminals. See figure 15.

**Battery Replacement**
1. Connect the two (2) battery leads to the new battery terminals. See figure 15.
   - Red lead to (+) positive terminal.
   - Black lead to (-) negative terminal.
2. Put the battery or batteries back into the battery pack with the battery terminals facing up.
3. Zip the battery pack and place it back into the battery compartment.
4. Reconnect the battery harnesses.
5. Replace the battery compartment lid.
VII. OPERATION

BEFORE GETTING ONTO YOUR SCOOTER
- Have you fully charged the batteries? See VI. “Batteries and Charging.”
- Is the manual freewheel lever in the drive position? Never leave the manual freewheel lever in freewheel mode unless you are manually pushing your scooter.
- Is the tiller lock knob in the unlocked position? See IX. “Disassembly and Assembly.”

GETTING ONTO YOUR SCOOTER
1. Make certain that the key is removed from the key switch.

   ! WARNING! Never get onto or off of your scooter without first removing the key from the key switch. This will prevent the scooter from moving if accidental throttle control lever contact is made.

2. Stand at the side of your scooter.
3. Make certain that the seat is locked securely in position.
4. Position yourself comfortably and securely in the seat.
5. Make certain that your feet are safely on the floorboard.

PRE-RIDE ADJUSTMENTS AND CHECKS
- Are you positioned comfortably in the seat?
- Is the seat at the proper height?
- Is the seat securely in place?
- Is the tiller at a comfortable setting and locked securely in place? See VIII. “Comfort Adjustments.”
- Is the key fully inserted into the key switch? See V. “Your Scooter.”
- Does the scooter’s horn work properly?
- Is your proposed path clear of people, pets, and obstacles?
- Have you planned your route to avoid adverse terrain and as many inclines as possible?

OPERATING YOUR SCOOTER

   ! WARNING! The following can adversely affect steering and stability while operating your scooter:
- Holding onto or attaching a leash to walk your pet
- Carrying passengers (including pets)
- Hanging any article from the tiller
- Towing or being pushed by another motorized vehicle

   Such practices could cause loss of control and/or tipping, resulting in personal injury and/or damage to your scooter.

Keep both hands on the tiller and your feet on the floorboard at all times while operating your scooter. This driving position gives you the most control over your vehicle.
- Set the speed adjustment dial to your desired speed.
- Press your thumb against the appropriate side of the throttle control lever.
- The electromechanical disc park brake automatically disengages and the scooter accelerates smoothly to the speed you preselected with the speed adjustment dial.
- Pull on the left handgrip to steer your scooter to the left.
- Pull on the right handgrip to steer your scooter to the right.
VII. OPERATION

- Move the tiller to the center position to drive straight ahead.
- Release the throttle control lever to decelerate and come to a complete stop.
- The electromechanical disc park brake automatically engages when your scooter comes to a stop.

NOTE: Your scooter’s reverse speed is slower than that of the forward speed you preset with the speed adjustment dial.

GETTING OFF OF YOUR SCOOTER
1. Bring your scooter to a complete stop.
2. Remove the key from the key switch.
3. Carefully and safely get out of the seat to either side of your scooter.

POWER DOWN TIMER FEATURE
Your scooter is equipped with an energy saving automatic power down timer feature designed to preserve your scooter’s battery life. If you mistakenly leave the key in the key switch and in the “on” position but do not use your scooter for approximately 20 minutes, the controller shuts down automatically. Although the controller is shut down, power will still be supplied to the lighting system.

If the power down timer feature takes effect, perform the following steps to resume normal operation.
1. Remove the key from the key switch.
2. Reinsert the key and power up your scooter.
VIII. COMFORT ADJUSTMENTS

TILLER ANGLE ADJUSTMENT

WARNING! Remove the key from the key switch before adjusting the tiller or the seat. Never attempt to adjust the tiller or the seat while the scooter is in motion.

Your scooter is equipped with an adjustable pivoting tiller.
1. Turn the tiller adjustment knob counterclockwise to loosen the tiller. See figure 16.
2. Move the tiller to a comfortable position.
3. Turn the tiller adjustment knob clockwise to secure the tiller in position.

NOTE: In order to lower the tiller to the scooter deck, you must first remove the seat. Remove the seat by pulling it straight up and off of the scooter.

SEAT HEIGHT ADJUSTMENT
The seat can be repositioned to one of two different heights. See figure 17.
1. Remove the seat from your scooter.
2. Use the attached ring to pull and remove the detent pin from the lower seat post.
3. Raise or lower the upper seat post to the desired seat height.
4. While holding the upper seat post at that height, match up the adjustment holes in the upper and lower seat post.
5. Fully insert the detent pin.
6. Replace the seat.

SEAT ROTATION
The seat lock lever is located at the bottom right side of the seat. The lever allows you to lock the seat into one of four positions: forward, rearward, left, and right.

1. Pull up on the seat lock lever to unlock the seat.
2. Rotate the seat to the desired position.
3. Release the seat lock lever to lock the seat securely in place.
ARMREST WIDTH ADJUSTMENT
The armrest width can be adjusted inward or outward. See figure 17A.
1. Remove the detent pins located near the adjustment knobs.
2. Loosen the armrest adjustment knobs at the back of the seat frame.
3. Slide the armrests in or out to the desired width.
4. Reinsert the detent pins through the adjustment holes of both the seat frame and armrest frame.
5. Tighten the armrest adjustment knobs as required.

The armrests can also pivot upward to aid in getting onto and off of your scooter.

Figure 17A. Armrest Width Adjustment
DISASSEMBLY

No tools are required to disassemble or assemble your scooter. Always disassemble or assemble your scooter on a level, dry surface with sufficient room for you to work. Keep in mind that the disassembled sections of a scooter take up more floor space than when assembled.

You can disassemble your scooter into four pieces: the seat, the front section, the rear section, and the battery pack. See figure 18.

Before disassembling the scooter, remove the key and place the manual freewheel lever in the drive (forward) position.

![Figure 18. Disassembled Scooter](image)

**WARNING!** Lifting weight beyond your physical capability may result in personal injury. Ask for assistance when necessary before disassembling or assembling your scooter.

1. Lock the tiller in place by pushing the tiller lock knob in and turning it clockwise 90°. See figure 19. The front wheel must face forward in order to lock the tiller.
2. Remove the seat by pulling it straight upward.
3. Remove the battery compartment lid and place it out of the way.
4. Unplug the front-to-rear harness and both battery harnesses. See figure 20.
IX. DISASSEMBLY AND ASSEMBLY

Toggle Latch Release
1. Push in the toggle latch release button while pulling back the toggle latch. See figure 21.
2. Position the toggle latch buckle over the top of the toggle latch. See figure 22.
3. Lower the tiller to the scooter floorboard and fully tighten the tiller adjustment knob.

Frame Separation
1. Push back on the seat post to pivot the rear section backward until it is standing vertically on its end. See figure 23.
2. Lift the front section up until the lower pegs are no longer in the slots. See figure 24.
3. Carefully lift the front section vertically away from the rear section. See figure 25.
IX. DISASSEMBLY AND ASSEMBLY

ASSEMBLY
1. Position the front and rear sections of your scooter as shown in figure 25.
2. Use the tiller handle to lift the front section as you align the lower slots of the front section with the corresponding pegs on the front of the rear section. See figure 24.
3. Holding the seat post, slowly pivot the rear section forward until the curved locking brackets are fully connected onto the top rear pegs. See figure 23.
4. Raise the tiller and fully tighten the tiller adjustment knob.
5. Secure the toggle latch. See figure 21.
   ■ Lower the toggle latch buckle.
   ■ Push back on the toggle latch so it locks into place.
6. Connect the front-to-rear harness and both battery harnesses. See figure 20.
7. Replace the battery compartment lid.
8. Replace the seat and rotate it until it locks into place.
9. Unlock the front wheel by turning the tiller lock knob 90° counterclockwise. See figure 19A.

WARNING! After assembling your scooter make absolutely certain the tiller lock knob is in the unlocked position before attempting to ride your scooter.
X. BASIC TROUBLESHOOTING

Any electromechanical device requires occasional troubleshooting. However, most problems that arise can usually be solved with a bit of thought and common sense. Many of these problems occur because the batteries are not fully charged or because the batteries are worn down and can no longer hold a charge.

DIAGNOSTIC BEEP CODES
The diagnostic beep codes for your scooter are designed to help you perform basic troubleshooting quickly and easily. A diagnostic beep code will sound in the event one of the conditions listed below develops.

NOTE: Your scooter will not run unless the beep code condition is resolved and the scooter has been turned off, then turned back on.

<table>
<thead>
<tr>
<th>BEEP CODE</th>
<th>CONDITION</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>(2)</td>
<td>Battery voltage is too low to operate the scooter.</td>
<td>Charge fully until charger and any meters indicate completion.</td>
</tr>
<tr>
<td>(3)</td>
<td>Battery Voltage is too high to operate the scooter.</td>
<td>Call your authorized Pride Provider for assistance.</td>
</tr>
<tr>
<td>(5)</td>
<td>Solenoid brake trip. The manual freewheel lever may be in the freewheel position.</td>
<td>Remove the key, then push the manual freewheel lever to the drive position, restart your scooter.</td>
</tr>
<tr>
<td>(6)</td>
<td>Throttle trip. The throttle control lever may have been depressed while inserting the key.</td>
<td>Release the throttle control lever completely, then reinsert the key.</td>
</tr>
<tr>
<td>(7)</td>
<td>Throttle trip. Throttle potentiometer fault or speed potentiometer fault.</td>
<td>Call your authorized Pride Provider for assistance.</td>
</tr>
<tr>
<td>(8)</td>
<td>The scooter’s motor is disconnected.</td>
<td>Call your authorized Pride Provider for assistance.</td>
</tr>
<tr>
<td>(9)</td>
<td>Possible controller trip. You may be attempting to install the battery pack while the key is inserted or the motor controller may be in overheat protective mode.</td>
<td>Shut down your scooter for a minimum of several minutes to allow the controller to cool. Or, try reinserting the key into the key switch.</td>
</tr>
</tbody>
</table>

What if all the systems on my scooter seem to be “dead”?
- Make certain that the key is fully inserted into the key switch.
- Check that the batteries are fully charged. See VI. “Batteries and Charging.”
- Push in the main circuit breaker’s reset button. See V. “Your Scooter.”
- Make certain that all wiring harnesses (battery and front-to-rear) are firmly connected.
- Be sure the power down timer feature hasn’t been activated. Fully remove the key from the key switch then reinsert the key back into the key switch.

What if the motor runs but my scooter does not move?
- Your scooter was probably left in freewheel mode.
- When the manual freewheel lever is pushed rearward, the brakes are disengaged and all power to the motor/transaxle is cut.
- Push the manual freewheel lever forward then remove the key—reinsert the key back into the key switch to restore normal operation to your scooter.
X. Basic Troubleshooting

What if the battery condition meter dips way down and the motor surges or hesitates when I press the throttle control lever?
- Fully charge your scooter’s batteries. See VI. “Batteries and Charging.”
- Have your authorized Pride Provider load test each battery.

What if the main circuit breaker trips repeatedly?
- Charge the scooter’s batteries more frequently. See VI. “Batteries and Charging.”
- If the problem persists, have both of your scooter’s batteries load tested by your authorized Pride Provider.
- See VI. “Batteries and Charging” or IV. “Specifications” for information about your scooter’s battery type.
- Check the fuse located next to the circuit breaker button.

In the event the fuse ceases to work (blows):
- Remove the fuse by pulling it out of its slot.
- Examine the fuse to be sure it is blown. See figures 26 and 27.
- Insert a new fuse of the proper rating.

![Figure 26. Working Fuse](image1)
![Figure 27. Blown Fuse](image2)

If you experience any problems with your scooter that you are not able to solve, contact your authorized Pride Provider for information, maintenance, and service.
XI. CARE AND MAINTENANCE

Your scooter requires a minimal amount of care and maintenance. If you do not feel confident in your ability to perform the maintenance listed below, you may schedule inspection and maintenance with your authorized Pride Provider. The following areas require periodic inspection and/or care and maintenance.

TIRE CONDITION AND TREAD WEAR

- Regularly inspect your scooter’s tires for signs of wear.
- Use a rubber conditioner on your scooter’s tire sidewalls to help to preserve them.

⚠️ WARNING! Do not apply rubber conditioner on tire tread; this may cause the tires to become dangerously slippery.

EXTERIOR SURFACES

- Bumpers and trim also benefit from an occasional application of a rubber or vinyl conditioner.

⚠️ WARNING! Do not use a rubber or vinyl conditioner on the scooter’s seat (if vinyl), floorboard, or tire tread. They will become dangerously slippery and result in personal injury and/or damage to your scooter.

- The scooter shroud is made from durable ABS plastic and coated with an advanced formula urethane paint. A light application of car wax will help the shroud retain its high gloss.

WIRING HARNESSES

- Regularly check wiring harness insulation for wear or damage.
- Have your authorized Pride Provider repair or replace any damaged connector, connection, or insulation that you find before using your scooter again.

AXLE BEARINGS AND THE MOTOR/TRANSAXLE ASSEMBLY

- These items are all prelubricated, sealed, and require no subsequent lubrication.

CONSOLE, CHARGER, AND ELECTRONICS

- Keep these areas free of moisture.
- If any of these items are exposed to moisture, let them dry thoroughly before operating your scooter again.

STORAGE

If you plan on not using your scooter for an extended period of time, it is best to:

- Fully charge its batteries prior to storage.
- Disconnect the batteries.
- Store your scooter in a warm, dry environment.
- Avoid storing your scooter where it will be exposed to temperature extremes.

⚠️ WARNING! Always protect batteries from freezing temperatures and never charge a frozen battery. This damages the battery and can cause personal injury.

For prolonged storage, you may wish to place several boards under the frame of your scooter to raise the scooter off of the ground. This takes the weight off the tires and reduces the possibility of flat spots developing on the areas of the tires contacting the ground.
XII. WARRANTY

THREE-YEAR LIMITED WARRANTY
For three (3) years from the date of purchase, Pride will repair or replace at our option to the original purchaser, free of charge, any of the following parts found upon examination by an authorized representative of Pride to be defective in material and/or workmanship:

Structural frame components, including:
- Main Frame
- Fork
- Seat Post
- Tiller Frame

THREE-YEAR PRORATA WARRANTY
Three-year prorata drivetrain warranty, including:
- Transaxle
- Motor Brake (electronic function ONLY)
- Brake

These components will be prorated on the following schedule:
- First year: 100% replacement of parts cost
- Second year: 67% replacement of parts cost
- Third year: 50% replacement of parts cost

NOTE: If there is an increase in the operational noise level in the transaxle, the warranty does not apply. An increase in operational noise level usually occurs due to abusive and excessive strain on the scooter.

ONE-YEAR LIMITED WARRANTY
For one (1) year from the date of purchase, Pride will repair or replace at our option to the original purchaser, free of charge, any of the following parts found upon examination by an authorized representative of Pride to be defective in material and/or workmanship:
- Bearings
- Bushings
- Rubber Components
- Plastic components except body
- Electronic Controllers
- Chargers
- Harnesses
- Any other electrical subassembly

SIX-MONTH WARRANTY
The battery is covered by a separate six-month warranty, provided by the battery manufacturer. The batteries are not warranted by Pride.

RECONDITIONED UNITS WARRANTY
All reconditioned units are covered by a six-month warranty from Pride effective from the date of purchase.

WARRANTY EXCLUSIONS
This warranty does not extend to those items which may require replacement due to normal wear and tear.
- ABS Plastic shrouds
- Motor brushes
- Upholstery and seating
- Brake Pads
- Tires and tubes
- Fuses/Bulbs
XII. WARRANTY

- Circumstances beyond the control of Pride
- Labor, service calls, shipping, and other charges incurred for repair of the product, unless specifically authorized, IN ADVANCE, by Pride Mobility Products Corporation
- Repairs and/or modifications made to any part without specific consent from Pride

Exclusions also include components with damage caused by:
- Contamination
- Abuse, misuse, accident, or negligence
- Battery fluid spillage or leakage
- Commercial use, or use other than normal
- Improper operation, maintenance, or storage

NOTE: Gradual deterioration in performance because the battery has been left in a discharged state, left in cold conditions for an extended period of time, or worn out through heavy use is not covered

SERVICE CHECKS AND WARRANTY SERVICE
Warranty service must be performed by an authorized Pride Provider. Do not return faulty parts to Pride without prior written authorization. All transportation costs and shipping damage incurred while submitting parts for repair or replacement are the responsibility of the purchaser. Please contact your authorized Pride Provider for information on the current cost associated with a service visit.

There is no other express warranty.

IMPLIED WARRANTIES
Implied warranties, including those of merchantability and fitness for a particular purpose, are limited to one (1) year from the date of original purchase and to the extent permitted by law. Any and all implied warranties are excluded. This is the exclusive remedy. Liabilities for consequential damages under any and all warranties are excluded.

Some states do not allow limitations on how long an implied warranty lasts or do not allow the exclusion of limitation of incidental or consequential damages. So, the above limitation or exclusion may not apply to you.
